Some courses may require families to purchase materials beyond those supplied by the K12 Private Academy to successfully complete the course. For more information, please contact our school.

# ELEM SCHOOL K-5

*Note: Course materials will be available in various physical and/or digital formats.*

Course Name	Subject	Course Description
ENGLISH LANGUAGE ARTS K	English	The English Language Arts K program comprises two courses, ELA K and Phonics K. The program provides kindergarten students with a complete early literacy learning experience. Students work through structured lessons that emphasize reading readiness, phonics, language skills, literature, writing skills, and handwriting through a combination of teacher-led instruction (either live or via embedded video within the course) and independent practice, both online and offline. The program provides a strong foundation in comprehension and vocabulary to instill a lifelong interest in reading and learning. Phonics prepares students to become independent readers through teacher-led, systematic, multisensory instruction in a developmentally appropriate manner. Students review letter names, practice phonological awareness, and learn decoding skills and sight words. Letter tiles, a variety of interactive games and activities, and decodable readers (brief stories that consist entirely of words students can read independently) support multimodal learning. Read-aloud instruction through a wide variety of texts kindles the imagination and builds knowledge while developing listening skills, comprehension, and vocabulary. Students acquire the critical skills and knowledge required for reading and literacy. Text selections include engaging classic literature, exciting contemporary titles, and informative nonfiction topics in a variety of formats including trade books, magazines, and e-books. Poems and nursery rhymes help students further expand vocabulary and comprehension while developing a love of language. Drawing, and later writing, in students' My Writing Journal K lays the foundations of the writing process as students brainstorm, discuss, illustrate, and share ideas with others. Targeted handwriting activities provide gentle instruction to help students print letters correctly.
ENGLISH LANGUAGE ARTS 1	English	The English Language Arts program comprises two courses, ELA and Phonics. The program provides a well-balanced approach to literacy that integrates phonics, reading, writing, grammar, vocabulary, spelling, and handwriting. Students develop comprehension, build vocabulary, and gain a lifelong interest in reading. Thematic units in literacy contain workshops in which instruction is anchored by a focus text. Through a combination of teacher-led instruction (either live or via embedded video within the course) and independent practice (both online and offline), students build knowledge by exploring both classic and contemporary works in different genres and formats—fiction, poetry, drama, nonfiction, trade books, magazines, and e-books. Beginning in the second semester, students complete focused grammar activities and write a variety of compositions by following the writing process. Phonics prepares students to become independent readers through teacher-led, systematic, multisensory instruction in a developmentally appropriate manner. Students review phonological awareness and learn advanced decoding skills and sight words. Letter tiles, a variety of interactive games and activities, and decodable readers (brief stories that consist entirely of words students can read independently) support multimodal learning. Spelling instruction begins in the second half of the first semester in ELA, building on the foundation of letter-sound knowledge previously mastered in Phonics. Targeted handwriting activities provide gentle instruction to help students print letters correctly.

Course Name	Subject	Course Description
ENGLISH LANGUAGE ARTS 2 SUMMIT	English	English Language Arts 2 Summit provides a well-balanced approach to literacy that connects reading, writing, grammar, word study (including vocabulary and spelling), and handwriting into one integrated program. The course comprises 12 thematic units. Each unit contains workshops in which reading, writing, and word study are anchored by a focus text. Through read-aloud videos, independent reading, and close reading activities, students explore both classic and contemporary works in different genres and formats—fiction, poetry, drama, nonfiction, and magazines. Through studying model writing from the reading selections, students use the writing process to complete a variety of short and long compositions. Students learn about grammar, usage, and mechanics and apply those skills as they write, revise, and proofread their work. Students grow their vocabulary by learning the meanings of words from the reading selections, as well as their ability to determine word meanings through strategy-based instruction on concepts such as word relationships, context clues, and word parts. Foundational concepts of phonological awareness and phonics are also included. Spelling instruction focuses on common spelling patterns and understanding how to apply them to words beyond those on the spelling lists.
ENGLISH LANGUAGE ARTS 3 SUMMIT	English	Summit English Language Arts 3 provides a well-balanced approach to literacy that connects reading, writing, grammar, vocabulary, and spelling into one integrated program. Dedicated time for keyboarding practice is also included. The course comprises 14 units, including 2 assessment units. Each unit contains workshops that have one major focus (reading, writing, or word study) for instruction and reinforcement of big ideas. In reading workshops, students read independently both classic and contemporary works in different genres and formats—fiction, poetry, drama, nonfiction, and magazines—before exploring each text through various activities. In writing workshops, students study writing models and then use the writing process to write a variety of compositions. They learn about grammar, usage, and mechanics and apply those skills as they revise and proofread their work. In word study workshops, students grow their vocabulary by learning the meanings of groups of conceptually related words. Students also learn to focus on spelling patterns that are necessary to be fluent, proficient readers, writers, and spellers.
ENGLISH LANGUAGE ARTS 4 SUMMIT	English	ELA 4 Summit provides a well-balanced approach to literacy that connects reading, writing, grammar, vocabulary, and spelling into one integrated program. Dedicated time for key boarding practice is also included the course made-up of 12 units. Each unit contains workshops that center on one major focus (reading, writing, or word study) for instruction and reinforcement of lofty ideas. In reading workshops, students read independently in a variety of genres and formats—fiction, poetry, drama, nonfiction, and magazines— before exploring each text through various activities. In writing workshops, students analyze model writing samples and then work through the writing process to develop original compositions of their own. They learn about grammar, usage, and mechanics and apply those skills as they revise and proofread their work. In word study workshops, students grow their vocabulary by learning the meanings of groups of conceptually related words. Students also learn to focus on spelling patterns that are necessary to be fluent, proficient readers, writers, and spellers.
ENGLISH LANGUAGE ARTS 5 SUMMIT	English	Summit English Language Arts 5 provides a well-balanced approach to literacy that connects reading, writing, grammar, vocabulary, and spelling into one integrated program. Dedicated time for keyboarding practice is also included. The course is made up of 12 units. Each unit contains workshops that center on one major focus (reading, writing, or word study) for instruction and reinforcement of big ideas. In reading workshops, students read independently in a variety of genres and formats—fiction, poetry, drama, nonfiction, magazines, and graphic novels—before exploring each text through various activities. In writing workshops, students analyze model writing samples and then work through the writing process to develop original compositions of their own. They learn about grammar, usage, and mechanics and apply those skills as they revise and proofread their work. In word study workshops, students grow their vocabulary by learning the meanings of groups of conceptually related words. Students also learn to focus on spelling patterns that are necessary to be fluent, proficient readers, writers, and spellers.
MATH K	Math	Math K is designed to provide students with a strong foundation in mathematical concepts. Students master content through a combination of teacher-led instruction (either live or via embedded video within the course) and independent practice, both online and offline. Teacher-led instruction engages students using online resources, including virtual manipulatives, videos demonstrating concepts with physical manipulatives, and videos teaching concepts through song. During independent practice, students solve problems online, often working with virtual manipulatives, and offline in an activity book. The Math K curriculum begins with a heavy emphasis on numbers and counting, leading to an understanding of addition and subtraction. Throughout the Math K course, students also explore mathematical concepts found around them in the world, including clocks and calendars, position and patterns, subitizing, shapes, measurable attributes, and money.

Course Name	Subject	Course Description
MATH 1	Math	Math continues to build a strong foundation in mathematical concepts. Students master content through a combination of teacher-led instruction (either live or via embedded video within the course) and independent practice. Teacher-led instruction engages students using online teacher resources, including virtual manipulatives, videos demonstrating concepts with physical manipulatives, and videos teaching concepts through song. During independent practice, students solve problems online, often working with virtual manipulatives, and offline in an activity book. The Math curriculum focuses on numbers and counting, data representations, addition and subtraction, story problems, length, time, shapes, and place value. Throughout the Math 1 course, students review mathematical concepts found around them in the world. They also master addition and subtraction math facts through 10.
MATH 2 SUMMIT	Math	Math 2 Summit is designed to support the true depth of knowledge required by today's standards. With rich content to form conceptual understanding and enough practice to support mastery, including time built-in for individualized independent practice, games, and offline practice. Summit Math 2 includes the tools and technology that students need to succeed. Summit Math 2 focuses on numbers through 1,000; time and money; two-digit addition and subtraction; story problems; shapes; number patterns; and data displays.
MATH 3 SUMMIT	Math	Math 3 Summit is designed to support the true depth of knowledge required by today's standards. With rich content to form conceptual understanding and enough practice to support mastery, including time built-in for individualized independent practice, games, and offline practice, Summit Math 3 includes the tools and technology that students need to succeed in a blended learning environment. Summit Math 3 focuses on reviewing patterns and number sense; discovering addition, subtraction, multiplication, and division strategies; exploring shapes and calculating area; learning about fractions and equivalent fractions; measuring time, length, liquid volume, and mass; and exploring and making data displays.
MATH 4 SUMMIT	Math	Math 4 Summit is designed to support the true depth of knowledge required by today's standards. With rich content to form conceptual understanding and enough practice to support mastery, including time built-in for individualized independent practice, games, and offline practice, Summit Math 4 includes the tools and technology that students need to succeed in a blended learning environment. Summit Math 4 focuses on expanding understanding of operations with whole numbers, developing a greater understanding of fractions, discovering decimals and their relationship to fractions, and exploring geometric figures.
MATH 5 SUMMIT	Math	Math 5 Summit is designed to support the true depth of knowledge required by today's standards. With rich content to form conceptual understanding and enough practice to support mastery, including time built-in for individualized independent practice, games, and offline practice, Summit Math 5 includes the tools and technology that students need to succeed in a blended learning environment. Summit Math 5 focuses on expanding understanding of operations with fractions, developing greater fluency with operations with multi-digit numbers, expanding understanding of decimals, and learning to perform operations with, decimals, learning about the coordinate plane, and exploring volume.
SCIENCE K	Science	Science K brings science alive by providing students a combination of virtual lab investigations (with options for hands-on learning), interactive lessons that provide opportunities for inquiry, and an array of e-books that capture students' attention and grow their interest in science. The curriculum begins with an overview of what science is and who scientists are. Students then focus on plant and animal relationships and analyze the weather. In the last half of the course, students explore how the sun affects their world and explore the interactions between different forces.
SCIENCE 1	Science	Science brings science alive by providing students a combination of virtual lab investigations (with options for hand-on learning), interactive lessons that provide opportunities for inquiry, and an array of e-books that capture students' attention and grow their interest in science. The curriculum begins with an overview of what science is and how to study it. Students then focus on plant and animal traits and relationships. In the last half of the course, students explore the patterns they see in the sky and examine how sounds and light are used to communicate and help them understand their world.
SCIENCE 2	Science	Science brings science alive by providing students a combination of virtual lab investigations (with options for hand-on learning), interactive lessons, and an array of e-books that capture students' attention and grow their interest in science. Students engage in science and engineering practices as they explore topics such as matter and its interactions, changes to the earth, and plants and animals. Throughout the course, students conduct investigations using digital tools and simulations. Some labs also include alternative investigations that use household materials.

Course Name	Subject	Course Description
SCIENCE 3	Science	Science brings science alive by providing students a combination of virtual lab investigations (with options for hand-on learning), interactive lessons, and an array of e-books that capture students' attention and grow their interest in science. Students engage in science and engineering practices as they explore topics such as organisms, the environment, weather, climate, motion, and forces. Throughout the course, students conduct investigations using digital tools and simulations. Some labs also include alternative investigations that use household materials.
SCIENCE 4	Science	Science brings science alive by providing students a combination of virtual lab investigations (with options for hand-on learning), interactive lessons, and an array of e-books that capture students' attention and grow their interest in science. Students engage in science and engineering practices as they explore topics such as energy, waves, information transfer, plant and animal structures, senses, and the earth's features and resources. Throughout the course, students conduct investigations using digital tools and simulations. Some labs also include alternative investigations that use household materials.
SCIENCE 5 SUMMIT	Science	Science brings science alive by providing students a combination of virtual lab investigations (with options for hand-on learning), interactive lessons, and an array of e-books that capture students' attention and grow their interest in science. Students engage in science and engineering practices as they explore topics such as matter, organisms, ecosystems, the earth's systems, and the earth's place in the universe. Throughout the course, students conduct investigations using digital tools and simulations. Some labs also include alternative investigations that use household materials.
SOCIAL STUDIES K	History	This course introduces students to fundamental topics within the social studies discipline. These topics include family, home, community and culture, geography, chronology, early U.S. history, civics and the responsibilities of citizenship, and economics. Students begin by locating themselves and their families within a community and culture. They learn about basic physical geography and how to read maps and globes. Students explore what history is and how they study the past. They learn about the first peoples of the Americas and the founding of the United States. Students identify symbols of and celebrations in the United States and investigate the lives of significant historical figures in the context of civic responsibility. They also explore citizenship and basic economics.
SOCIAL STUDIES 1	History	This course covers several different areas of social studies, including physical and human geography; history and historical sources; U.S. symbols, songs, and celebrations; citizenship and civic responsibility; and economics. Students learn about the locations, characteristics, resources, and cultures of the earth, as well as those in their own community. They explore concepts related to the study of history and the history of the United States. Students identify key U.S. symbols and learn the reasons behind special national observances. They learn the meaning of citizenship and the duties and responsibilities of good citizens. Students explore basic economic concepts, such as needs and wants, buying and selling, and consumers and producers. They investigate the development of ancient civilizations in the Fertile Crescent, Egypt, India, China, and Greece.
SOCIAL STUDIES 2 SUMMIT	History	Second graders experience a broad introduction to social studies and build a base for future learning. Students expand their map skills by using features of maps, including scale, direction, and location, read maps and draw conclusions. They put their map skills to use exploring the physical and human features of their community, state, country, continent, and world. Students increase their understanding of chronology and investigate the past using sources to learn more about themselves and their communities. They study people who influenced history as leaders, investors, and trailblazers. Students discover cultures around the world and in their own communities. Students also learn the basic concepts and operations of the economy and are introduced to the basic principles of personal finance. Students describe the role of government and expand their understanding of how citizens contribute to their communities.
SOCIAL STUDIES 3 SUMMIT	History	Third graders explore the world around them through the lens of diverse social studies concepts and topics. Students apply their knowledge of basic map skills to identify the purpose of various maps and interpret how people adapt and change their environment to adjust to different climates and natural resources. Students then investigate the regions of the country, studying their physical and human features, history, and culture. They describe how culture changes and adapts to meet human needs as they explore cultures around the world and in their communities. Students learn about the founding documents and principles of America's government to see how state, local, tribal, and national governments operate. They learn that citizens have rights, responsibilities, and civic duties. Students investigate the relationship between humans and their environment to learn ways they can make a difference in their communities. They survey various public issues then choose one to research and propose solutions. Students expand their understanding of basic principles of economics and the importance of savings and budgeting for personal financial health.

Course Name	Subject	Course Description
AMERICAN STUDIES 4 SUMMIT	History	Fourth graders investigate the geography, history, economics, and civics of the United States. Students begin their study of geography by learning how to read and interpret different types of maps. They use maps to explore the five regions of the United States, as well as neighboring countries to the north and south. Students learn about the nation's natural landmarks and landforms, weather and climate, plant life, and wildlife. They learn about capitals cities, urban and rural areas, business and industry, recreational and historical sites, and the importance of preserving the environment. Using primary and secondary sources they explore historical events and perspectives in American history. While students learn about cultural exchanges, settlement patterns, and migrations as the country changed over time, they begin to analyze historical events in terms of cause and effect to better understand the past. Students use research skills to learn about their state and share those findings with others. Students study basic economic concepts, financial choices, taxes, banking, and investing. They also explore federal, state, and local government and learn how America's founding documents established government by the people. They learn about citizenship rights and responsibilities, limits to rights, and how citizen address modern-day issues in their communities and nation.
HISTORY OF THE UNITED STATES	History	Students in History of the United States ED explore United States history, geography, economics, and government. This is done by focusing on the influence of physical and cultural characteristics on national origins, growth, and development. Students study Indigenous cultures, European exploration, colonization, settlement, the American Revolution, the founding of the Republic, the early years of the United States, the Civil War, and the 20th Century in the United States. Students learn about citizenship and the major components of the government as outlined in the United States Constitution. The course emphasizes critical thinking skills, including questioning, examining fact and opinion, analyzing and evaluating sources of information, contrasting and comparing using primary and secondary sources, and conducting research using a variety of resources. Additional social studies skills are integrated in the lessons including reading and analyzing maps, creating and interpreting charts and graphs, identifying relationships, engaging in debate, writing persuasively, and developing thinking and independent study skills.
ART K	Art	This course introduces students to the world of art. Students learn about paintings and sculptures. They see art that looks realistic and art that looks imaginary and discover how artists use lines, shapes, colors, patterns, textures, and forms in artworks. Students discuss portraits, landscape, and still life artworks. They draw, paint, and sculpt their own artworks that are inspired by the artworks they study.
ART 1	Art	This course introduces students to the world of art and architecture. Students learn about paintings and sculptures and see art that looks realistic and art that looks imaginary. Students discover how artists use lines, shapes, colors, patterns, textures, symmetry, and forms in portraits, landscape, and still life artworks. They discover ancient cave paintings and ancient art from Egypt, Greece, and China. Students draw, paint, and sculpt their own artworks that are inspired by the artworks they study
ART 2	Art	This course introduces students to the world of art and architecture. Students learn about paintings and sculptures, both realistic and abstract. They discover how artists use lines, shapes, colors, patterns, textures, and forms in portraits, landscape, and still life artworks. They discover art forms from Europe, Asia, Africa, and the Americas. Students draw, paint, and sculpt their own artworks that are inspired by the artworks they study.
ART 3	Art	This course introduces students to art and architecture from the 1400s through the 1700s. Students extend their knowledge of the elements of art and principles of design, such as form, texture, pattern, contrast, and balance. They investigate artworks from Europe, Asia, Africa, and the Americas. Students draw, paint, and sculpt their own artworks using a variety of materials and techniques, all of which are inspired by the artworks they study.
ART 4	Art	This course introduces students to the art and architecture of early America through the modern era. Students extend their knowledge of elements of art and principles of design, such as form, texture, pattern, contrast, and balance. They investigate Colonial American artworks and modern artworks that generated new forms of expression. Students draw, paint, and sculpt their own artworks using a variety of materials and techniques, all of which are inspired by the artworks they study.
EARLY AMERICAN ART	Art	This course introduces students to early American art, beginning with the art of the Indigenous peoples of North America and ending with the art and architecture of Colonial America. Students extend their knowledge of elements of art and principles of design such as form, texture, pattern, contrast, and balance. Students draw, paint, and sculpt their own artworks using a variety of materials and techniques, all of which are inspired by the artworks they study.

Course Name	Subject	Course Description
MUSIC, GRADES K–2	Music	Explore and build foundational music skills with Music. This course offers a variety of learning activities that include singing, dancing, virtual instruments, listening maps, and authentic sound recordings. Music comes to life in the course through six units that are organized into three sections: Concepts, Music Reading, and Celebrations. Students learn about these musical elements: duration, pitch, design, tone color, expressive qualities, and cultural context. Students explore music from around the world while also exploring beat, meter, rhythm, melody, harmony, texture, form, tone color, dynamics, tempo, style, and music background. Students also have the opportunity to perform seasonal and celebratory songs.
MUSIC, GRADES 3–5	Music	Get ready to travel the world through music as students explore and build foundational music skills. This hands-on music course offers a variety of learning activities that include singing, dancing, virtual instruments, listening maps, authentic sound recordings with famous past and present artists, a player that allows students to customize key signatures, tempo, and lyrical highlighting, and playing the recorder. Six units in the course are organized into three sections: Concepts, Music Reading, and Celebrations. Students learn about these musical elements: duration, pitch, design, tone color, expressive qualities, and cultural context, while exploring music from all over the world. Students also learn to read music and explore beat, meter, rhythm, melody, harmony, tonality, texture, form, tone color, dynamics, tempo, articulation, style, and music background. Students apply the music skills they are learning while performing seasonal and celebratory songs.
ELEMENTARY SPANISH I	World Language	This introductory Spanish course provides a fun, interactive experience for a student’s first exposure to the Spanish language. The content for each unit is based on an authentic story, myth, or legend from a Spanish-speaking culture. This course, designed specifically for younger students, focuses principally on vocabulary acquisition through stories, games, songs, and practice activities. Students are exposed to the Spanish language and Spanish-speaking cultures in a fun environment where they can explore meanings and begin to express themselves through simple words and phrases.
ELEMENTARY SPANISH II	World Language	This introductory Spanish II course provides a fun, interactive experience for a student’s early exposure to the Spanish language. The content for each unit is based on an authentic story, myth, or legend from a Spanish-speaking culture. This course, designed specifically for younger students, focuses principally on vocabulary acquisition through stories, games, songs, and practice activities. In addition to vocabulary, students are introduced to grammar concepts, which will help them to better understand vocabulary and provide them a foundation for more extensive grammar study in later Spanish courses. Students also practice Spanish pronunciation through reading short passages taken from the authentic stories presented in each unit. Students are exposed to the Spanish language and Spanish-speaking cultures in a fun environment where they can explore meanings and begin to express themselves through simple words and phrases.
ELEMENTARY CHINESE I	World Language	This introductory Chinese course provides a fun, interactive experience for a student’s first exposure to the Chinese language. The content for each unit is based on an authentic story from China. This course, designed specifically for younger students, focuses principally on vocabulary acquisition through stories, games, songs, and practice activities. Students are exposed to the Chinese language and Chinese-speaking cultures in a fun environment where they can explore meanings and begin to express themselves through simple words and phrases.
ELEMENTARY CHINESE I	World Language	Students are introduced to Mandarin Chinese through a series of dynamic and engaging animations based on authentic Chinese stories. These stories share an aspect of Chinese culture and language from famous myths to historical tales familiar to all Chinese children. Each story introduces key vocabulary words and phrases that are then practiced through a series of interactive games and activities. In addition, other video and media materials are used to further demonstrate culture and daily life in China. Students are introduced to simplified Characters throughout the course and targeted character-based activities help to prepare students how to read and write Chinese characters. Students are challenged with comprehension quizzes at the end of every unit, as well as teacher-graded assignments where they will be able to speak Mandarin Chinese. All of the materials in the course are designed to familiarize students with Chinese culture, characters, vocabulary, and simple phrases.

Course Name	Subject	Course Description
ONLINE LEARNING K-1	Orientation	<p>The Introduction to Online Learning teaches students to navigate and acclimate to the online program. In this course, students will learn how to:</p> <ul style="list-style-type: none"> <li>• Identify the key components of the online school.</li> <li>• Navigate the online school and move through lessons.</li> <li>• Locate and understand important tools and resources such as their daily plan, class connect sessions, and grades.</li> <li>• Work with interactive activities and download a worksheet/PDF within a lesson.</li> <li>• Complete a sample assessment.</li> <li>• Use materials safely.</li> <li>• Use the Reading Toolbar.</li> <li>• Be a good digital citizen and form good habits in order to be successful.</li> </ul>
ONLINE LEARNING 2-5	Orientation	<p>The Introduction to Online Learning teaches students to navigate and acclimate to the online program. Course Name	Subject	Course Description
SUMMIT LANGUAGE ARTS 6	English	<p>This course equips students with the essential language arts skills needed throughout their academic careers. Students read and analyze a variety of informational and fictional texts. Instruction and reading strategies accompany reading selections to help engage students in the text and sharpen their comprehension. Students express their ideas and knowledge using standard (formal) English in written and oral assignments. Writing expressive, analytical, and procedural compositions helps students develop communication skills necessary in today's world. Vocabulary is taught explicitly and through an array of vocabulary acquisition strategies that give students the tools to independently increase their vocabulary. Students study grammar, usage, and mechanics; and practice sentence analysis, sentence structure, and proper punctuation. The course includes discussion activities that engage students in the curriculum while creating a sense of community.</p>
SUMMIT LANGUAGE ARTS 7	English	<p>This course continues the development of comprehension and analysis of informational and fictional texts with an ongoing emphasis on reading strategies. Students express themselves using standard (formal) English in written and oral presentations. Analyzing and practicing the form and structure of various genres of writing enhances students' communication skills. Students study a variety of media to understand informational and persuasive techniques, explicit and implied messages, and how visual and auditory cues affect messages. Grammar, usage, and mechanics skills are deepened. Students continue to widen their vocabulary and apply acquisition strategies. The course includes discussion activities that engage students in the curriculum while creating a sense of community.</p>
SUMMIT LANGUAGE ARTS 8	English	<p>Throughout this course, students engage in literary analysis and close reading of short stories, poetry, drama, novels, and informational texts. The course focuses on the interpretation of literary works, analysis of informational texts, and the development of oral and written communication skills in standard (formal) English. Students read "between the lines" to interpret literature and go beyond the text to discover how the culture in which a work of literature was created contributes to the theme and ideas it conveys. Analysis of the structure and elements of informational texts and media help students develop the skills needed for academic success and navigating the world. Students continue to acquire knowledge and skills in grammar, usage, mechanics, and vocabulary. Implementing reading strategies, self-monitoring progress, and reflecting on successes and challenges help students become metacognitive learners. The course includes discussion activities that engage students in the curriculum while creating a sense of community.</p>

Course Name	Subject	Course Description
SUMMIT MATH 6	Math	In Stride’s Grade 6 mathematics course, students deepen their understanding of multiplication and division of fractions to apply their knowledge to divide fractions by fractions, with an additional focus on increasing efficiency and fluency. Students gain a foundation in the concepts of ratio and rate as an extension of their work with whole number multiplication and division, and in preparation for work with proportional relationships in Grade 7. Students also make connections among area, volume, and surface area, and continue to lay the groundwork for deep algebraic understanding by interpreting and using expressions and equations
SUMMIT MATH 7	Math	In Stride’s Grade 7 mathematics course, students focus on real-world scenarios and mathematical problems involving algebraic expression and linear equations and begin to apply their understanding of rational numbers with increased complexity. The course lays the foundation for exploring concepts of angle, similarity, and congruence, more formally addressed in Grade 8, as students work with scale drawings and construct and analyze relationships among analyze relationships among geometric figures. Students also develop and apply understandings of proportional relationships.
SUMMIT MATH 8	Math	Grade 8 mathematics course prepares students for more advanced study in algebra as students solve linear equations and systems of equations, work with radical and integer exponents, gain conceptual understanding of functions, and use functions to model quantitative relationships. To prepare students for more advanced study in geometry, the course emphasizes the Pythagorean theorem and a deepening exploration of similarity and congruence.
PRE-ALGEBRA	Math	In this course, students take a broader look at computational and problem-solving skills while learning the language of algebra. Students extend their understanding of ratio to develop an understanding of proportions and solve problems including scale drawings, percent increase, and decrease, simple interest, and tax. Students extend their understanding of numbers and properties of operations to include rational numbers. Signed rational numbers are contextualized and students use rational numbers in constructing expressions and solving equations. Students derive formulas and solve two- dimensional area problems including the area of composite figures. In three dimensions, students find the surface area using formulas and nets. Students also compute the volume of three-dimensional objects including cubes and prisms. Students make use of sampling techniques to draw inferences about a population including comparative inferences about two populations. Students also investigate chance processes through experimental and theoretical probability models.
SUMMIT EARTH SCIENCE	Science	The Earth Science curriculum builds on natural curiosity of students. By connecting them to the beauty of geological history, the amazing landforms around the globe, the nature of the sea and air, and the newest discoveries about our universe, the curriculum gives students an opportunity to relate to their everyday world. Students will explore topics such as the fundamentals geology, oceanography, meteorology, and astronomy; Earth’s minerals and rocks; Earth’s interior; plate tectonics; earthquakes, volcanoes, and the movements of continents; geology and the fossil record; the oceans and the atmosphere; the solar system and the universe. Lesson assignments help students discover how scientists investigate the science of our planet.

Course Name	Subject	Course Description
SUMMIT LIFE SCIENCE	Science	The Life Science program invites students to investigate the world of living things- at levels both large and small-by reading, observing, and experimenting with aspects of life on Earth. Students explore an amazing variety of organisms, the complex workings of cell and cell biology, the relationship between living things and their environments, and discoveries in the world of modern genetics. Students tackle such topics as ecology, microorganisms, animals, plants, cells, animals, species, adaptation, heredity, genetics, and the history of life on Earth. Lesson activities and assignments help students discover how scientists investigate the living world.
SUMMIT PHYSICAL SCIENCE	Science	The Physical Science program introduces students to many aspects of the physical world, focusing first on chemistry and then on physics. The course provides an overview of the physical world and gives students tools and concepts to think clearly about matter, atoms, molecules, chemical reactions, motion, force, momentum, work and machines, energy, waves, electricity, light, and other aspects of chemistry and physics. Among other subjects, students study the structure of atoms; the elements and the Periodic Table; chemical reactions; forces, including gravitational, motion, acceleration, and mass; and energy, including light, thermal, electricity, and magnetism.
SUMMIT AMERICAN HISTORY SINCE 1865	History	In the second half of a detailed two-year survey of the history of the United States, this course takes students from the westward movement of the late 1800s to the present. Lessons integrate topics in geography, civics, and economics. The course guides students through critical episodes in the story of America. Students examine the effect of the settlement of the American West; investigate the social, political, and economic changes that resulted from industrialization; explore the changing role of the United States in international affairs from the late nineteenth century through the end of the Cold War and trace major events and trends in the United States from the Cold War through the first decade of the twenty-first century.
WORLD HISTORY I	History	<p>Intermediate World History A surveys the story of the human past from the period before written records (prehistory) through the fourteenth century. The course is organized chronologically and, within broad eras, regionally. Students examine change over time, including the development of religion, philosophy, the arts, and science and technology. Geography concepts and skills are introduced as they appear in the context of the historical narrative. Students explore what archaeologists and historians have learned about the earliest hunter-gatherers and farmers and then study the four river valley civilizations.</p> <p>They also study the origins of Confucianism, Hinduism, Buddhism, and Judaism and the eras in which they developed. The second half of the course traces the history of classical Greece and Rome, the Byzantine Empire, and the origins of Christianity and Islam, continuing to the fourteenth century in Europe, North Africa, and East Asia. Students develop and refine historical thinking skills by practicing document and art analysis, conducting research, and analyzing events from multiple perspectives. They also practice map reading skills, study how historians draw conclusions about the past as well as what those conclusions are and connect past events to today's world.</p>

Course Name	Subject	Course Description
WORLD HISTORY II	History	Intermediate World History B begins in the fourteenth century and continues to the beginning of World War I. Students use the second volume of Stride’s The Human Odyssey, as well as online lessons and assessments. The course is organized chronologically and, within broad eras, regionally. Lessons explore developments in religion, philosophy, the arts, and science and technology. The course introduces geography concepts and skills as they appear in the context of the historical narrative. Students also learn and practice historical thinking skills by analyzing events and documents from the past from multiple perspectives. In addition, students investigate how past events affect today’s world. Major topics of study include the following: -The cultural rebirth of Europe during the Renaissance -The Reformation and Counter-Reformation -The rise of Islamic empires -Changing civilizations in China, Japan, and Russia -The Age of Exploration and the civilizations that flourished in the Americas for hundreds of years prior to encounters with Europeans -The changes that came with the Scientific Revolution and the Enlightenment -Democratic revolutions of the eighteenth and nineteenth centuries -The Industrial Revolution and its consequences - Nineteenth-century nationalism and imperialism -The transformations in communications and society at the turn of the twentieth century.
SUMMIT INTERMEDIATE AMERICAN ART I +	Art	ART06 Summit Intermediate American Art II lessons include an introduction to the artists, cultures, and great works of American art and architecture from the end of the Civil War through modern times. Students will investigate paintings done in various styles, from impressions to pop; learn about modern sculpture and folk art; discover how photographers and painters have inspired one another; examine examples of modern architecture, from skyscrapers to art museums; and create artworks inspired by works they learn about.
SUMMIT INTERMEDIATE WORLD ART II +	Art	ART07 Summit Intermediate World Art I lessons include an introduction to the artists, cultures, and great works of world art and architecture from ancient through medieval times. Students will investigate how artists from different civilizations used various techniques, from painting to mosaic; examine elements of design and styles of decoration, from the spiral to the solar disk; and explore some of the best-preserved works from ancient tombs, including the treasures of Egypt’s King Tut.
SUMMIT INTERMEDIATE WORLD ART III +	Art	ART08 Summit Intermediate World Art II lessons include an introduction to the artists, cultures, and great works of world art and architecture from the Renaissance through modern times. Students will study various works of art from the Renaissance and beyond; discover great works of art and see how they influenced later artists; compare and contrast works from many civilizations, from paintings to sculpture, architecture, book covers, prints, and more; and create art works inspired by works they learn about.
MUS MS MUSIC	Music	Explore and build foundational musical skills with Exploring Music from eDynamic. This course offers a variety of learning activities. The course is organized into eight units. Students will learn how we hear music and the ways in which music can impact our lives. The lessons will cover essential elements of music such as rhythm, pitch, and harmony, as well as different musical genres and the role of singing and various instruments. Students will also be introduced to the basics of music composition and explore the history and culture of music over the years.

Course Name	Subject	Course Description
MIDDLE SCHOOL SPANISH I	World Language	<p>Middle School Spanish I has been carefully aligned to national standards set forth by the American Council on the Teaching of Foreign Languages (ACTFL). Students in Middle School Spanish I focus on the four key areas of world language study: listening, speaking, reading, and writing. The course represents an ideal blend of language-learning pedagogy and online learning. Each unit consists of a new vocabulary theme and grammar concept, reading and listening comprehension activities, speaking and writing activities, multimedia cultural presentations, interactive activities that reinforce vocabulary and grammar, and frequent assessments during which language progression can be monitored. There is a strong emphasis on providing context and conversational examples for the language concepts presented in each unit. Students have many opportunities to practice and master vocabulary and grammar before moving to the next unit. In this course, students explore greetings; school; adjectives; colors; continents, countries, and numbers; telling time; -ir, -er, and -ar verbs; and days, months, and seasons.</p>
MIDDLE SCHOOL SPANISH II	World Language	<p>Middle School Spanish II has been carefully aligned to national standards as set forth by the American Council on the Teaching of Foreign Languages (ACTFL). Students in Middle School Spanish II continue to focus on the four key areas of world language study: listening, speaking, reading, and writing. The course represents an ideal blend of language-learning pedagogy and online learning. Each unit consists of a new vocabulary theme and grammar concept, reading and listening comprehension activities, speaking and writing activities, multimedia cultural presentations, interactive activities that reinforce vocabulary and grammar, and frequent assessments during which their language progression can be monitored. There is a strong emphasis on providing context and conversational examples for the language concepts presented in each unit with many opportunities for practice to allow students to master the vocabulary and grammar before moving to the next unit. In this course, students explore hobbies and pastimes, food, family, places, animals, shopping, and weather.</p>
MIDDLE SCHOOL CHINESE I	World Language	<p>This fun, interactive course for middle school students is filled with diverse multimedia language activities. The instruction is equivalent to that found in the first semester of high school Chinese I. Students begin their introduction to Chinese by focusing on the four key areas of world language study: listening, speaking, reading, and writing. The course represents an ideal blend of language learning pedagogy and online learning. Each unit consists of a new vocabulary theme and grammar concept, reading, and listening comprehension activities speaking and writing activities, multimedia cultural presentations, and interactive activities and practices that reinforce vocabulary and grammar. There is a strong emphasis on providing context and conversational examples for the language concepts presented in each unit. Both Chinese characters and pinyin are presented together throughout the course and specific character practices help students learn characters. Students should expect to be actively engaged in their own language learning; become familiar with common vocabulary terms and phrases; comprehend a wide range of grammar patterns; participate in simple conversations and respond appropriately to basic conversational prompts; analyze and compare cultural practices, products, and perspectives of various Chinese-speaking countries; and take frequent assessments by which their language progression can be monitored. The course has been carefully aligned to national standards as set forth by ACTFL (the American Council on the Teaching of Foreign Languages).</p>

Course Name	Subject	Course Description
MIDDLE SCHOOL CHINESE II	World Language	<p>Students continue their introduction to Chinese by focusing on the four key areas of foreign language study: listening, speaking, reading, and writing. The course represents an ideal blend of language learning pedagogy and online learning. Each unit consists of a new vocabulary theme and grammar concept, reading, and listening comprehension activities speaking and writing activities, multimedia cultural presentations, and interactive activities and practices which reinforce vocabulary and grammar. There is a strong emphasis on providing context and conversational examples for the language concepts presented in each unit. Both Chinese characters and pinyin are presented together throughout the course and specific character practices are introduced after the first quarter. Students should expect to be actively engaged in their own language learning, become familiar with common vocabulary terms and phrases, comprehend a wide range of grammar patterns, participate in simple conversations and respond appropriately to basic conversational prompts, analyze and compare cultural practices, products, and perspectives of various Chinese-speaking regions, and take frequent assessments where their language progression can be monitored. The course has been carefully aligned to national standards as set forth by ACTFL (the American Council on the Teaching of Foreign Languages).</p> <p>Prerequisite: K12 Middle School Chinese 1 (or equivalent)</p>
MIDDLE SCHOOL CAREER EXPLORATIONS 1	Career Readiness	<p>This course is a Product Based Learning course (PBL) and is designed as an exploration of career pathways. In this course students explore basic concepts in the broad areas within the National Clusters Framework, as well as career options in various clusters. Students study the concepts of marketing, engineering, education, training, healthcare, and construction in addition to other common related functions. Students complete projects to develop a deeper understanding of the roles these careers functions play.</p>
MIDDLE SCHOOL CAREER EXPLORATIONS 2	Career Readiness	<p>This course is a Product Based Learning course (PBL) and is designed as an exploration of career pathways. In this course students explore basic concepts in the broad areas within the National Clusters Framework, as well as career options in various clusters. Students study the concepts of cybersecurity, nutrition, social responsibility, and the process of applying for a job in addition to other common related functions. Students complete projects to develop a deeper understanding of the roles these career functions play.</p>
INTRODUCTION TO THE INTERNET	Career Readiness	<p>TCH006 Introduction to the Internet is a CodeHS introductory computer science course that teaches the basics of designing a web page, and how information is represented digitally and sent over the Internet. Students will create a personal portfolio website showing projects they build throughout the course.</p> <p>With a unique focus on creativity, problem- solving, and project-based learning, Introduction to the Internet gives students the opportunity to explore several important topics of computing using their own ideas and creativity to develop an interest in computer science that will foster further endeavors in the field.</p> <p>Each lesson includes at least one formative short multiple-choice quiz. At the end of each unit, students take a summative multiple-choice unit quiz that assesses their knowledge of the concepts covered in the unit.</p>

Course Name	Subject	Course Description
WORLD OF COMPUTING	Career Readiness	<p>TCH007 World of Computing is a CodeHS introductory computer science course introducing the basics of programming with Karel the Dog, and the history and impact of computing. Students will learn to code using blocks to drag and drop, but they can switch between blocks and text as desired.</p> <p>With a unique focus on creativity, problem-solving, and project-based learning, World of Computing gives students the opportunity to explore several important topics of computing using their own ideas and creativity to develop an interest in computer science that will foster further endeavors in the field.</p> <p>Each lesson includes at least one formative short multiple-choice quiz. At the end of each unit, students take a summative multiple-choice unit quiz that assesses their knowledge of the concepts covered in the unit.</p>
WEB DESIGN	Career Readiness	<p>TCH008 Web Design is a Code HS course that teaches students how to build their own web pages. Students will learn the languages HTML and CSS and will create their own live homepages to serve as portfolios of their creations. By the end of this courses, students will be able to explain how web pages are developed and viewed on the Internet, analyze and fix errors in existing websites, and create their very own multi-page websites.</p> <p>Each lesson includes at least one formative short multiple-choice quiz. At the end of each unit, students take a summative multiple-choice unit quiz that assesses their knowledge of the concepts covered in the unit.</p>
Intro to MS Game Design 1	Career Readiness	<p>Does your love of video games motivate you to pursue a career in this field? Pursue your passion by learning about the principles of game design through the stages of development, iterative process, critiques, and game development tools. Put these new skills to work by designing your own game!</p>
MS Game Design 2	Career Readiness	<p>This course is a Project Based Learning course (PBL). Now that you have the basics of game design down, let's use your creativity to develop a game from start to finish! Develop your game creation skills and practice with the tools professionals use to launch your career options in the field of game design. The content of this course also applies to certification exams.</p>
Middle School Photography	Electives	<p>TCH005ADE2 Middle School Photography is eDynamic curriculum that teaches the basics of using a camera, lighting, and how to choose great subjects to create magazine-worthy photographs. This course is designed to provide students with the skills needed to become proficient in photography. Through a combination of lectures, discussions, and hands on activities, students will learn the core terminology, the various tools, the elements of art, and principles of design that can impact the quality of a photograph. Students will be able to identify the key techniques and methods that can be used to create the perfect photograph</p>

Course Name	Subject	Course Description
Health 6	Electives	<p>The sixth-grade health course helps students develop the knowledge and skills they need to make healthy decisions to stay active, safe, and informed, as teenagers and as adults. The lessons and activities introduce important aspects of the main types of health: physical health, social health and wellness, and emotional and mental health. Among other topics, students explore the renal and urinary system, nutrition, food allergies, prevention of common diseases, the influence of the media on health behaviors and buying habits, safety, Internet safety, conflict resolution, bullying, and violence prevention. They also explore topics related to the use and abuse of tobacco, drugs, and alcohol, including the opioid epidemic; environmental health, including a service project; and mental and emotional health and disorders. The course engages students with relevant health and wellness topics, and real-world concepts and health issues. Graded assignments, quizzes, and tests assess student understanding of the various health topics and concepts from the course.</p>
Health 7	Electives	<p>The seventh-grade health course helps students develop the knowledge and skills they need to make healthy decisions to stay active, safe, and informed as teenagers and as adults. The lessons and activities introduce important aspects of the main types of health: physical health, social health and wellness, and emotional and mental health. Among other topics, students explore the circulatory system, the benefits of physical activity, nutrition, how to identify and avoid risky behaviors, safety, building character through maintaining healthy relationships, bullying, and violence prevention. They also explore topics related to the use and abuse of tobacco, drugs, and alcohol; environmental health; and mental and emotional health and disorders. The course engages students with relevant health and wellness topics and real-world concepts and health issues. Graded assignments, quizzes, and tests assess student understanding of the various health topics and concepts from the course.</p>
Health 8	Electives	<p>The eighth-grade health course helps students develop the knowledge and skills they need to make healthy decisions to stay active, safe, and informed as teenagers and as adults. The lessons and activities introduce important aspects of the main types of health: physical health, social health and wellness, and emotional and mental health. Among other topics, students explore the nervous system, communicable and noncommunicable diseases, online safety, and conflict resolution. They also explore topics related to the use and abuse of tobacco, drugs, and alcohol; environmental health; and mental and emotional health and disorders. The course engages students with relevant health and wellness topics, real-world concepts, and health issues. Graded assignments, quizzes, and tests assess student understanding of the various health topics and concepts from the course.</p>
Physical Fitness 6	Electives	<p>Students will develop the knowledge and skills they need to make positive fitness decisions to stay active, safe, and informed, as teenagers and adults. The lessons and activities introduce important aspects of physical health and fitness and focus on helping students learn new fitness skills and stay active. Students will set fitness goals and assess their progress throughout the course. Students will use daily Fitness Plans to guide their physical activity and Fitness Logs to track their activity.</p>

Course Name	Subject	Course Description
Physical Fitness 7	Electives	Students will develop the knowledge and skills they need to make positive fitness decisions to stay active, safe, and informed, as teenagers and adults. The lessons and activities introduce important aspects of physical health and fitness and focus on helping students learn new fitness skills and stay active. Students will set fitness goals and assess their progress throughout the course. Students will use daily Fitness Plans to guide their physical activity and Fitness Logs to track their activity.
Physical Fitness 8	Electives	Students will develop the knowledge and skills they need to make positive fitness decisions to stay active, safe, and informed, as teenagers and adults. The lessons and activities introduce important aspects of physical health and fitness and focus on helping students learn new fitness skills and stay active. Students will set fitness goals and assess their progress throughout the course. Students will use daily Fitness Plans to guide their physical activity and Fitness Logs to track their activity.
WELCOME TO ONLINE LEARNING	Orientation	The Online Learning: Middle and Highschool course is an introduction to the virtual learning environment for middle and high school students with information for Learning Coaches. Topics include an orientation to people and parts of an online school., the online school platform, opportunities for socializing, sample assessments, and tips about how to create an effective learning environment, manage time, and be successful. Each lesson has video tutorials, printable guides, and practice activities such as sending e-mail or creating schedules and backup plans. Veteran students and Learning Coaches share personal experiences and advice.
CAR003: Welcome to Stride Career Prep	Career Readiness Orientation	The Welcome Career Prep course is an introduction to the career prep program, curriculum, and features. The course includes an overview of career clusters, career and technical service organizations, and work-based learning. An orientation to project-based learning prepares students for completing coursework their career courses. Students also explore career learning collaboration tools such as Tallo, Nepris, and Microsoft Teams. Each lesson incorporates real experiences of past and present career learning students through video, text, and project samples.

Introduction to Online Learning

+ Course is graded on a Pass (P) / Fail (F) basis.

\* Course is only available to students enrolled in the career pathway program.

Course materials will be available in various formats, which  
< = New course for 24-25SY

Some courses may require families to purchase materials beyond those supplied by K12 Private Academy to successfully complete the course.

# HIGH SCHOOL 9-12

To graduate and receive an Upper School diploma, students must earn 24 credits in the following subject areas and be enrolled as a full-time student for at least two consecutive semesters.

English	<b>4 credits</b>
Math	<b>4 credits</b> (Algebra 1 and higher)
Science	<b>4 credits</b> (must include 2 lab science credits)
History and Social Sciences	<b>4 credits</b> (must include 1 credit of U.S. History)
World Languages	<b>2 credits</b> must be a non-English language course)
Physical Education	<b>0.5 credit</b>
Health	<b>0.5 credit</b>
Electives	<b>5 credits</b>
<b>TOTAL</b>	<b>24 credits</b>

Students must complete a minimum of six (6) credits and must spend one academic year enrolled as a full-time student with K12 Private Academy to be eligible for a K12 Private Academy diploma. Individual exceptions will be considered for students with credits from a public school or accredited private institution with a grade of C or above in all courses, provided that the student completes one academic year as a full-time student with K12 Private Academy.

A student must be FULL-TIME for their senior year (the two last semesters of a student's senior year must be consecutive) to be eligible for a diploma.

Many of the science courses will have lab assignments. Before these assignments, students will be responsible for obtaining some lab materials (such as common household items). The materials that are needed for each lab are listed in the Advanced Preparation section of the corresponding unit.

\*\*Course offerings are subject to change throughout the year and not guaranteed.

## High School Course Levels

- In comprehensive courses, students do extensive writing and research projects and tackle problems that require analytical thinking. Course projects and activities also demand independent thinking and self-discipline.
- Honors courses hold students to a greater degree of accountability and demand even greater independence and self-discipline. Students synthesize and evaluate information and concepts from multiple sources and read texts typically assigned in college-level courses. Students also demonstrate college-level writing in essays that require analysis of primary and secondary sources, responsible use of evidence, and comprehensive citation of sources.
- AP® courses are college-level courses that follow the curriculum specified by the College Board. These courses are designed to prepare students for success on AP® exams, providing students the opportunity to earn credit at most of the nation's colleges and universities.

*Note: Course materials will be available in various physical and/ or digital formats.*

Course Name	Subject	Course Description
ENG108E2: SUMMIT ENGLISH 9	English Core	<p>This Summit English 9 course includes engaging and interactive instruction about reading, writing, speaking and listening, and language, with a focus on exploring a wide variety of genres and their elements. Students learn how to carefully read, interpret, and analyze literature and nonfiction works of cultural or historical significance appropriate to grade 9. Throughout the course, students practice narrative, informational, and argument writing. Students also develop and deliver presentations and participate in discussions with their peers.</p> <p>Course Length: Two semesters Prerequisites: Summit Language Arts 8 (or equivalent)</p>
ENG109E2: SUMMIT ENGLISH 9 HONORS	English Core	<p>The Summit English 9 Honors course includes engaging and interactive instruction about reading, writing, speaking and listening, and language, with a focus on exploring a wide variety of genres and their elements. Students learn how to carefully read, interpret, and analyze literature and nonfiction works of cultural or historical significance appropriate to grade 9. Throughout the course, students practice narrative, informational, and argument writing. Students also develop and deliver presentations and participate in discussions with their peers.</p> <p>This course includes all the topics in ENG108 as well as several extension activities. Each semester also includes an independent honors project.</p> <p>Course Length: Two semesters Prerequisites: Summit Language Arts 8 (or equivalent)</p>
ENG208E2: SUMMIT ENGLISH 10	English Core	<p>The Summit English 10 course includes engaging and interactive instruction about reading, writing, speaking and listening, and language, with a focus on exploring a wide variety of genres and their elements. Students learn how to carefully read, interpret, and analyze literature and nonfiction works of cultural or historical significance appropriate to grade 10. Throughout the course, students practice narrative, informational, and argument writing. Students also develop and deliver presentations and participate in discussions with their peers.</p> <p>Course Length: Two semesters Prerequisite: Summit English 9 (or equivalent)</p>
ENG209E2: SUMMIT ENGLISH 10 HONORS	English Core	<p>The Summit English 10 Honors course includes engaging and interactive instruction about reading, writing, speaking and listening, and language, with a focus on exploring a wide variety of genres and their elements. Students learn how to carefully read, interpret, and analyze literature and nonfiction works of cultural or historical significance appropriate to Grade 10. Throughout the course, students practice narrative, informative, and argument writing. Students also develop and deliver presentations and participate in discussions with their peers.</p> <p>This course includes all the topics in Summit English 10, as well as an independent honors project in each semester.</p> <p>Course Length: Two semesters Prerequisites: Summit English 9 (or equivalent)</p>
ENG303E3: SUMMIT AMERICAN LITERATURE	English Core	<p>In this course, students read and analyze works of American literature from colonial to contemporary times, including poetry, short stories, novels, drama, and nonfiction. These works provide opportunities for critical writing, creative projects, and online discussions. Students develop vocabulary skills and refresh their knowledge of grammar, usage, and mechanics in preparation for standardized tests.</p> <p>Course Length: Two semesters Prerequisite: Summit English 10 (or equivalent)</p>

Course Name	Subject	Course Description
ENG304E3: SUMMIT AMERICAN LITERATURE HONORS	English Core	<p>In this course, students read and analyze works of American literature from colonial to contemporary times, including poetry, short stories, novels, drama, and nonfiction. The literary works provide opportunities for critical writing, creative projects, and online discussions. Students develop vocabulary skills and refresh their knowledge of grammar, usage, and mechanics. Students enrolled in this challenging course will also complete independent projects that deepen their understanding of the themes and ideas presented in the curriculum.</p> <p>Course Length: Two semesters Prerequisites: Summit English 10 Honors (or equivalent) and teacher/school counselor recommendation</p>
ENG403: SUMMIT BRITISH AND WORLD LITERATURE	English Core	<p>Students read selections from British and world literature and analyze the themes, styles, and structures of these texts. They also make thematic connections among diverse authors, periods, and settings. Students complete guided and independent writing assignments that refine their analytical skills. They have opportunities for creative expression in projects of their choice. Students also practice critical reading and writing test-taking skills.</p> <p>Course Length: Two semesters Prerequisite: Summit American Literature (or equivalent)</p>
ENG404: SUMMIT BRITISH AND WORLD LITERATURE HONORS	English Core	<p>Students read selections from British and world literature in a loosely organized chronological framework. They analyze the themes, styles, and structures of these texts and make thematic connections among diverse authors, periods, and settings. Students work independently on many of their analyses and engage in creative collaboration with their peers. Students also practice test-taking skills for standardized assessments in critical reading and writing.</p> <p>Course Length: Two semesters Prerequisites: Summit English 10 Honors (or equivalent or Summit American Literature Honors (or equivalent), and teacher/school counselor recommendation</p>
ENG500E4: AP® ENGLISH LANGUAGE AND COMPOSITION	English Core	<p>AP English Language and Composition provides students with the opportunity to read and write critically.</p> <p>The course is structured into units, based on the College Board guide. Students will closely examine big ideas such as: rhetorical situation, claims and evidence, reasoning and organization and style. They will read a variety of non-fiction writings, including scientific, sociological, philosophical, and narrative texts. The students will read annotate and write synthesis essays (using several primary sources), as well as argument and rhetorical analysis essays. Students will work through the writing process using peer review and teacher feedback to complete several drafts of their work.</p> <p>The course is designed to be equivalent of a one-semester introductory college- or university -level survey course. This course meets guidelines outlined in the College Board’s AP® English Language and Composition Course and Exam Description.</p> <p>Course Length: Two semesters Prerequisites: Success in Summit English 10 Honors (or equivalent) or Summit American Literature Honors (or equivalent), and teacher/school counselor recommendation</p>
ENG510E4: AP® ENGLISH LITERATURE AND COMPOSITION	English Core	<p>AP English Literature and Composition provides students with the opportunity to read and analyze a variety of works and write about those works with stylistic maturity.</p> <p>The course is structured into units, based on the College Board Course and Exam Description. Students will closely examine big ideas such as: character, setting, structure, narration, figurative language, and literary argument. They will read fictional works, including short fiction, long fiction, poetry, and drama from a variety of countries and time periods. Students will practice analyzing works through an assortment of strategies. Students will write multiple essays encompassing prose fiction analysis, poetry analysis, and literary argument. They will also complete a full research paper that compares two works, utilizing secondary, as well as primary, sources. They will complete an annotated bibliography and work through the writing process using peer review and teacher feedback to complete several drafts of their paper. In addition, students will be given opportunities to practice for the AP® exam, with both multiple-choice questions and timed essays. This course is designed to be the equivalent of a one-semester introductory college-or-university-level survey course.</p> <p>Course Length: Two semesters Prerequisite: Success in Summit English 10 Honors (or equivalent) or Summit American Literature Honors (or equivalent), and teacher/school counselor recommendation</p>

Course Name	Subject	Course Description
MTH128: SUMMIT ALGEBRA I	Math Core	The Summit Algebra 1 course is intended to formalize and extend the mathematics that students learned in the middle grades. Because it is built to follow revised middle school math courses, the course covers slightly different ground than previous versions of algebra. In this course, students deepen their understanding of linear and exponential relationships by contrasting them with each other. Students also apply linear models to data that exhibit a linear trend. The course also covers analyzing, solving, and using quadratic functions. Course Length: Two semesters Prerequisite: None
MTH129: SUMMIT ALGEBRA 1 HONORS	Math Core	Summit Algebra 1 course is intended to formalize and extend the mathematics that students learned in the middle grades. Because it is built to follow revised middle school math courses, the course covers slightly different ground than previous versions of Algebra. In this course, students deepen their understanding of linear and exponential relationships by contrasting them with each other. Students also apply linear models to data that exhibit a linear trend. The course also covers analyzing, solving, and using quadratic functions. Course Length: Two semesters Prerequisites: None
MTH208: SUMMIT GEOMETRY	Math Core	Stride's Geometry course builds on the geometry covered in middle school to explore more complex geometric situations and deepen students' ability to explain geometric relationships, moving toward formal mathematical arguments. Specific topics include basic tools, transformations, proofs and congruence. Course Length: Two semesters Prerequisite: Algebra 1 (or equivalent)
MTH209: SUMMIT GEOMETRY HONORS	Math Core	This Summit Geometry Honors course builds on the geometry covered in middle school to explore more complex geometric situations and deepen students' ability to explain geometric relationships, moving toward formal mathematical arguments. Specific topics include similarity and congruence, analytic geometry, circles, the Pythagorean theorem, right triangle trigonometry, analysis of three-dimensional objects, conic sections, and geometric modeling. This course includes all the topics in MTH208 as well as several extension activities. Each semester also includes an independent honors project. Course Length: Two semesters Prerequisites: Algebra 1 (or equivalent)
MTH308: SUMMIT ALGEBRA II	Math Core	This Summit Algebra 2 course, students build on their work with linear, quadratic, and exponential functions, and extend their repertoire to include polynomial, rational, radical, and trigonometric functions. Students also expand their ability to model situations and solve equations, including solving quadratic equations over the set of complex numbers and solving exponential equations using the properties of logarithms. The course covers sequences and series, probability distributions, and more advanced data analysis techniques. Course Length: Two semesters Prerequisites: Algebra 1 and Geometry (or equivalents)
MTH309: SUMMIT ALGEBRA II HONORS	Math Core	This Summit Algebra 2 Honors course, students build on their work with linear, quadratic, and exponential functions, and extend their repertoire to include polynomial, rational, radical, and trigonometric functions. Students also expand their ability to model situations and solve equations, including solving quadratic equations over the set of complex numbers and solving exponential equations using the properties of logarithms. The course covers sequences and series, probably distributions, and more advanced data analysis techniques. This course includes all topics in MTH308 as well as several extension activities. Each semester also includes data analysis techniques. Course Length: Two semesters Prerequisite: Algebra 1 and Geometry or equivalent

Course Name	Subject	Course Description
MTH307: SUMMIT PRACTICAL MATH	Math Core	In this course, students use math to solve real-world problems—and real-world problems to solidify their understanding of key mathematical topics. Data analysis, math modeling, and personal finance are key themes in this course. Specific topics of study include statistics, probability, graphs of statistical data, regression, finance, and budgeting. In addition, students learn how to use several mathematical models involving algebra and geometry to solve problems. Proficiency is measured through frequent online and offline assessments as well as class participation. Units focused on projects also allow students to apply and extend their math skills in real-world cases. Course Length: Two semesters Prerequisites: Algebra I and Geometry
MTH403: SUMMIT PRE-CALCULUS/TRIGONOMETRY	Math Core	Pre-calculus weaves together concepts of algebra and geometry into a preparatory course for calculus. The course focuses on the mastery of critical skills and exposure to new skills necessary for success in subsequent math courses. Topics include quadratic, exponential, logarithmic, radical, polynomial, and rational functions; matrices; and conic sections in the first semester. The second semester covers an introduction to infinite series, trigonometric ratios, functions, and equations; inverse trigonometric functions; applications of trigonometry, including vectors; polar equations, and polar form of complex numbers; arithmetic of complex numbers; and parametric equations. Connections are made throughout the course to calculus and a variety of other fields related to mathematics. Purposeful concentration is placed on how the concepts covered relate to each other. Demonstrating the connection between algebra and the geometry of concepts highlight the interwoven nature of the study of mathematics. Course Length: Two semesters Prerequisite: Geometry and Algebra II (or equivalents)
MTH413: SUMMIT PROBABILITY AND STATISTICS	Math Core	Students learn counting methods, probability, descriptive statistics, graphs of data, the normal curve, statistical inference, and linear regression. Proficiency is measured through frequent online and offline assessments, as well as asynchronous discussions. Problem-solving activities provide an opportunity for students to demonstrate their skills in real-world situations. Course Length: One semester Prerequisite: Algebra II (or equivalent)
MTH433: SUMMIT CALCULUS	Math Core	This course provides a comprehensive survey of differential and integral calculus concepts, including limits, derivatives, and integral computation, linearization, Riemann sums, the fundamental theorem of calculus, and differential equations. Content is presented across ten units and covers various applications, including graph analysis, linear motion, average value, area, volume, and growth and decay models. In this course, students use an online textbook, which supplements the instruction they receive and provides additional opportunities to practice using the content they have learned. Students will use an embedded graphing calculator applet (GCalc) for their work on this course; the software for the applet can be downloaded at no charge. Course Length: Two semesters Prerequisites: Pre-Calculus and Trigonometry (or equivalent)
MTH500E3: AP <sup>®</sup> CALCULUS AB	Math Core	In AP <sup>®</sup> Calculus AB, students learn to understand change geometrically and visually (by studying graphs of curves), analytically (by studying and working with mathematical formulas), numerically (by seeing patterns in sets of numbers), and verbally. Instead of simply getting the right answer, students learn to evaluate the soundness of proposed solutions and to apply mathematical reasoning to real-world models. Calculus helps scientists, engineers, and financial analysts understand the complex relationships behind real-world phenomena. The equivalent of an introductory college-level calculus course, AP <sup>®</sup> Calculus AB prepares students for the AP <sup>®</sup> exam and further studies in science, engineering, and mathematics. Course Length: Two semesters Prerequisites: Honors Geometry, Honors Algebra II, Pre-Calculus/Trigonometry (or equivalents), and teacher/school counselor recommendation

Course Name	Subject	Course Description
MTH510E3: AP® STATISTICS	Math Core	<p>AP® Statistics gives students hands-on experience in collecting, analyzing, graphing, and interpreting real-world data. They will learn to effectively design and analyze research studies by reviewing and evaluating real research examples taken from daily life. The next time they hear the results of a poll or study, they will know whether the results are valid. As the art of drawing conclusions from imperfect data and the science of real-world uncertainties, statistics play an important role in many fields. The equivalent of an introductory college-level course, AP® Statistics prepares students for the AP exam and for further study in science, sociology, medicine, engineering, political science, geography, and business.</p> <p>Course Length: Two semesters Prerequisites: Honors Algebra II (or equivalent) and teacher/school counselor recommendation</p>
SCI102E3: SUMMIT PHYSICAL SCIENCE	Science Core	<p>Students explore the relationship between matter and energy by investigating force and motion, the structure of atoms, the structure and properties of matter, chemical reactions, and the interactions of energy and matter. Students develop skills in measuring, solving problems, using laboratory apparatuses, following safety procedures, and adhering to experimental procedures. Students focus on inquiry-based learning, with both hands-on laboratory investigations and virtual laboratory experiences.</p> <p>Course Length: Two semesters Prerequisite: Middle School Physical Science (or equivalent)</p>
SCI113E3: SUMMIT EARTH SCIENCE	Science Core	<p>This course provides students with a comprehensive earth science curriculum, focusing on geology, oceanography, astronomy, weather, and climate. The program consists of in-depth online lessons, collaborative activities, virtual laboratories, and hands-on laboratories students can conduct at home. The course prepares students for further studies in geology, meteorology, oceanography, and astronomy courses, and gives them practical experience in implementing scientific methods.</p> <p>Course Length: Two semesters Prerequisite: Middle School Earth Science (or equivalent)</p>
SCI114E3: SUMMIT EARTH SCIENCE HONORS	Science Core	<p>This challenging course provides students with an honors-level earth science curriculum, focusing on geology, oceanography, astronomy, weather, and climate. The program consists of online lessons, an associated reference book, collaborative activities, and hands-on laboratories students can conduct at home. The course prepares students for advanced studies in geology, meteorology, oceanography, and astronomy courses, and gives them more sophisticated experience in implementing scientific methods. Additional honors assignments include debates, research papers, extended collaborative laboratories, and virtual laboratories.</p> <p>Course Length: Two semesters Prerequisites: Middle School Life Science (or equivalent), Middle School Physical Science (suggested, or equivalent); and teacher/school counselor recommendation.</p>
SCI203E3: SUMMIT BIOLOGY	Science Core	<p>In this comprehensive course, students investigate the chemistry of living things: the cell, genetics, evolution, the structure and function of living things, and ecology. The program consists of in-depth online lessons, including extensive animations, an associated reference book, collaborative explorations, and hands-on laboratory experience students can conduct at home.</p> <p>Course Length: Two semesters Prerequisite: Middle School Life Science (or equivalent)</p>

Course Name	Subject	Course Description
SCI204E3: SUMMIT BIOLOGY HONORS	Science Core	This course provides students with a challenging honors-level biology curriculum, focusing on the chemistry of living things: the cell, genetics, evolution, the structure and function of living things, and ecology. The program consists of advanced online lessons, including extensive animations, an associated reference book, collaborative explorations, and hands-on laboratory experiments students can conduct at home. Honors activities include research papers, extended collaborative laboratories, and virtual laboratories. Course Length: Two semesters Prerequisites: Middle School Life Science (or equivalent), success in previous science course; and teacher/school counselor recommendation
SCI303E3: SUMMIT CHEMISTRY	Science Core	This comprehensive course gives students a solid basis to move on to future studies. The course provides an in-depth survey of all key areas, including atomic structure, chemical bonding and reactions, solutions, stoichiometry, thermo chemistry, organic chemistry, and nuclear chemistry. The course includes direct online instruction, laboratories, and related assessments, used with a problem-solving book. Course Length: Two semesters Prerequisites: Satisfactory completion of either K12 Middle School Physical Science or Physical Science and a solid grasp of algebra basics, evidenced by success in Algebra I (or equivalents)
SCI304E3: SUMMIT CHEMISTRY HONORS	Science Core	This advanced course gives students a solid basis to move on to more advanced courses. The challenging course surveys all key areas, including a to mic structure, chemical bonding and reactions, solutions, stoichiometry, thermochemistry, organic chemistry, and nuclear chemistry, enhanced with challenging model problems and assessments. Students complete community- based written research projects that treat aspects of chemistry that require individual research and reporting and participate in online threaded discussions. Course Length: Two semesters Prerequisites: Success in previous science course. or Honors Algebra I (or equivalent); and teacher/school counselor recommendation
SCI403: SUMMIT PHYSICS	Science Core	This course provides a comprehensive survey of all key areas: physical systems, measurement, kinematics, dynamics, momentum, energy, thermodynamics, waves, electricity, and magnetism, and introduces students to modern physics topics such as quantum theory and the atomic nucleus. The course gives students a solid basis to move on to more advanced courses later in their academic careers. The program consists of online instruction, laboratories, and related assessments, plus an associated problem-solving book. Course Length: Two semesters Prerequisites: Algebra II and Pre-Calculus/Trigonometry (or equivalents) (Pre-Calculus/Trigonometry strongly recommended as a prerequisite, but this course may instead be taken concurrently with Summit Physics
SCI404: SUMMIT PHYSICS HONORS	Science Core	This advanced course surveys all key areas: physical systems, measurement, kinematics, dynamics, momentum, energy, thermodynamics, waves, electricity, and magnetism, and introduces students to modern physics topics such as quantum theory and the atomic nucleus. Additional honors assignments include research papers and student-designed projects. The course gives a solid basis for moving on to more advanced college physics courses. The program consists of online instruction, laboratories, and related assessments, plus an associated problem-solving book. Course Length: Two semesters Prerequisites: Algebra II or Honors Algebra II and Pre- Calculus/Trigonometry (Pre-Calculus/Trigonometry strongly recommended as a prerequisite, but this course may instead be taken concurrently with Summit Physics Honors; and teacher/ school counselor recommendation

Course Name	Subject	Course Description
SCI500E5: AP® BIOLOGY	Science Core	<p>This course guides students to a deeper understanding of biological concepts, including the diversity and unity of life, energy, and the processes of life, homeostasis, and genetics. Students learn about regulation, communication, and signaling in living organisms as well as interactions of biological systems. Students carry out a number of learning activities, including readings, interactive exercises, extension activities, hands-on laboratory experiments, and practice assessments. These activities are designed to help students gain an understanding of the science process and critical-thinking skills necessary to answer questions on the AP® Biology exam. The content aligns to the sequence of topics recommended by the College Board.</p> <p>Course Length: Two semesters</p> <p>Prerequisites: Success in Honors Biology, Honors Chemistry, Honors Algebra I (or equivalents); and teacher/school counselor recommendation required; success in Honors Algebra II highly recommended</p>
SCI510: AP® CHEMISTRY	Science Core	<p>Students solve chemical problems by using mathematical formulation principles and chemical calculations in addition to laboratory experiments. They build on their general understanding of chemical principles and engage in a more in-depth study of the nature and reactivity of matter. Students focus on the structure of atoms, molecules, and in, and then go on to analyze the relationship between molecular structure and chemical and physical properties. To investigate this relationship, students examine the molecular composition of common substances and learn to transform them through chemical actionists witch in creakingly predictable outcomes.</p> <p>Course Length: Two semesters</p> <p>Prerequisites: Honors Chemistry and Honors Algebra II (or equivalents), and teacher/school counselor recommendation</p>
SCI530: AP® ENVIRONMENTAL SCIENCE	Science Core	<p>The AP Environmental Science course is designed to engage students with the scientific principles, concepts, and methodologies required to understand the interrelationships within the natural world. The course requires that students identify and analyze natural and human-made environment problems, evaluate the relative risks associated with these problems, and examine alternative solutions for resolving or preventing them.</p> <p>Environmental science is interdisciplinary, embracing topics from geology, biology, environmental science, chemistry, and geography. The AP Environmental Science course is designed to be the equivalent of a one-semester, introductory college course in environmental science.</p> <p>Course Length: Two semesters</p> <p>Prerequisites: Students must have taken at least one year of high school algebra and successfully completed a high school earth science course.</p>
SCI010: SUMMIT ENVIRONMENTAL SCIENCE	Science Core	<p>This course surveys key topic areas, including the application of the scientific process to environmental analysis; ecology; energy flow; ecological structures; earth systems; and atmospheric, land, and water science. Topics also include the management of natural resources and analysis of private and governmental decisions involving the environment. Students explore actual case studies and conduct five hands-on, unit- long research activities, learning that political and private decisions about the environment and the use of resources require the accurate application of scientific processes, including proper data collection and responsible conclusions.</p> <p>Course Length: One semester</p> <p>Prerequisites: Success in previous high school science course and teacher/school counselor recommendation</p>

Course Name	Subject	Course Description
SCI330: ANATOMY AND PHYSIOLOGY	Science Core	Students will then learn about cell structure and their processes. They will discover the functions and purposes of the skeletal, muscular, nervous, cardiovascular, lymphatic, immune, respiratory, digestive, urinary, and endocrine systems, as well as diseases that affect those systems. The reproductive system is also discussed along with hereditary traits and genetics. Finally, students will explore the importance of accurate patient documentation as well as the technology used in the industry. Course Length: Two semesters Prerequisites: SCI203Biology
SCI030: FORENSIC SCIENCE	Science Core	This course surveys key topics in forensic science, including the application of the scientific process to forensic analysis, procedures and principles of crime scene investigation, physical and traces evidence, and the law and courtroom procedures from the perspective of the forensic scientist. Through online lessons, virtual and hands-on labs, and analysis of fictional crime scenarios, students learn about forensic tools, technical resources, forming and testing hypotheses, proper data collection, and responsible conclusions. Course Length: One semester Prerequisites: Successful completion of at least two years of high school science, including Biology (or equivalent) and Chemistry is highly recommended
HST103: WORLD HISTORY	History Core	In this comprehensive survey of world history from prehistoric to modern times, students focus in depth on the developments and events that have shaped civilization across time. The course is organized chronologically and, within broad eras, regionally. Lessons address developments in religion, philosophy, the arts, science and technology, and political history. The course also introduces geography concepts within the context of the historical narrative. Online lessons and assessments complement World History: Our Human Story, a textbook written and published by Stride. Students are challenged to consider topics in depth and from multiple perspectives as they analyze primary sources and maps and complete other projects. They practice historical thinking and writing skills as they explore the broad themes and big ideas of human history. Course Length: Two semesters Prerequisites: Middle School American History A, World History A, or World History B (or equivalents)
HST104: WORLD HISTORY HONORS	History Core	In this challenging survey of world history from prehistoric to modern times, students focus in-depth on the developments and events that have shaped civilization across time. The course is organized chronologically and, within broad eras, regionally. Lessons address developments in religion, philosophy, the arts, science and technology, and political history. The course also introduces geography concepts and skills within the context of the historical narrative. Online lessons and assessments complement World History: Our Human Story, a textbook written and published by Stride. Students are challenged to consider topics in depth as they analyze primary sources and maps, create timelines, and complete other projects—practicing advanced historical thinking and writing skills as they explore the broad themes and big ideas of human history. Students complete an independent honors project each semester.  Course Length: Two semesters Prerequisites: Middle School American A, World History A, or World History B (or equivalents)
HST203: MODERN WORLD STUDIES	History Core	In this comprehensive course, students follow the history of the world from approximately 1870 to the present. They begin with a study of events leading up to 1914, including the Second Industrial Revolution and the imperialism that accompanied it. Their focus then shifts to the contemporary era, including two world wars, the Great Depression, and global Cold War tensions. Students examine both the problems and accomplishments of the twentieth century, with a focus on political and social history. Students also explore topics in physical and human geography and investigate issues of concern in the contemporary world from multiple perspectives. Online lessons help students organize their studies, explore topics, review in preparation for assessments, and practice sophisticated skills of historical thinking and analysis. Activities include analyzing primary sources and maps, connecting past historical events to current events, and completing projects.  Course Length: Two semesters Prerequisites: Middle School World History A and World History B (or equivalents)

Course Name	Subject	Course Description
HST204: MODERN WORLD STUDIES HONORS	History Core	<p>In this advanced course, students investigate the history of the world from approximately 1870 to the present. They begin with an analysis of events leading up to 1914, including the Second Industrial Revolution and the imperialism that accompanied it. Their focus then shifts to the contemporary era, including two world wars, the Great Depression, and global Cold War tensions. Students undertake an in-depth examination of both the staggering problems and astounding accomplishments of the twentieth century, with a focus on political and social history. Students also explore advanced topics in physical and human geography and investigate issues of concern in the contemporary world. Activities include analyzing primary sources and maps, creating timelines, completing projects and written assignments, and conducting research. Students complete independent projects each semester.</p> <p>Course Length: Two semesters Prerequisites: Middle School World History A and World History B (or equivalents)</p>
HST213: GEOGRAPHY	History Core	<p>This course examines a broad range of geographical perspectives covering all the major regions of the world. Students examine the similarities and differences among the regions as they explore each region's location, physical characteristics, climate, and significant geographical features. They look at each region from cultural, economic, and political perspectives and closely examine the human impact on each region. Students learn and apply critical thinking skills as they study issues from multiple perspectives.</p> <p>Course Length: Two semesters</p>
HST303: U.S. HISTORY	History Core	<p>This course is a full-year survey that provides students with a comprehensive view of American history from the first migrations of nomadic people to North America to recent events. Readings are drawn from <i>The American Odyssey: A History of the United States</i>. Online lessons help students organize their study, explore topics in-depth, review in preparation for assessments, and practice skills of historical thinking and analysis. Activities include analyzing primary sources and maps, creating timelines, completing projects and written assignments, and conducting independent research.</p> <p>Course Length: Two semesters Prerequisites: World History or Modern World Studies (or equivalents) **All Students Must Take This Course**</p>
HST304: U.S. HISTORY HONORS	History Core	<p>This course is a challenging full-year survey that provides students with a comprehensive view of American history from the first migrations of nomadic people to North America to recent events. Readings are drawn from K12's <i>The American Odyssey: A History of the United States</i>. Online lessons help students organize their study, explore topics in-depth, review in preparation for assessments, and practice advanced skills of historical thinking and analysis. Activities include analyzing primary sources and maps, creating timelines, completing projects and written assignments, and conducting independent research. Students complete independent projects each semester.</p> <p>Course Length: Two semesters Prerequisites: World History, World History Honors, or Modern World Studies Honors (or equivalents), and teacher/school counselor recommendation</p>
HST403: U.S. GOVERNMENT AND POLITICS	History Core	<p>Students study the history, organization, and functions of the U.S. government. Beginning with the Declaration of Independence and continuing through to the present day, students explore the relationship between individual Americans and their governing bodies. Students take a close look at the political culture of our country and gain insight into the challenges faced by citizens, elected government officials, political activists, and others. Students also learn about the roles of political parties, interest groups, the media, and the Supreme Court. They analyze current and historical issues from multiple points of view to practice and deepen their critical thinking skills.</p> <p>Course Length: One semester Prerequisite: U.S. History (or equivalent) is recommended, but not required</p>

Course Name	Subject	Course Description
HST413: U.S. AND GLOBAL ECONOMICS	History Core	<p>In this course on economic principles, students explore the choices they face as producers, consumers, investors, and taxpayers. Students apply what they learn to real-world simulation problems. Topics of study include markets from historic and contemporary perspectives; supply and demand; theories of early economic philosophers such as Adam Smith and David Ricardo; theories of value; money (what it is, how it evolved, and the roles of banks, investment houses, and the Federal Reserve); Keynesian economics; how capitalism functions, focusing on productivity, wages, investment, and growth; issues of capitalism, such as unemployment, inflation, and the national debt; and the effects of globalization. Students also refine their critical thinking skills by analyzing economic issues from multiple perspectives.</p> <p>Course Length: One semester Prerequisite: U.S. Government and Politics (or equivalent) is recommended, but not required</p>
HST500: AP® U.S. HISTORY	History Core	<p>Students explore and analyze the economic, political, and social transformation of the United States since the time of the first European encounters. Students are asked to master not only the wide array of factual information necessary to do well on the AP® Exam, but also to practice skills of critical analysis of historical information and documents. Students read primary and secondary source materials and analyze problems presented by historians to gain insight into challenges of interpretation and the ways in which historical events have shaped American society and culture. The content aligns to the sequence of topics recommended by the College Board and to widely used textbooks. The course prepares students for the AP® Exam.</p> <p>Course Length: Two semesters Prerequisite: Success in a previous history course and teacher/ school counselor recommendation</p>
HST510: AP® U.S. GOVERNMENT & POLITICS	History Core	<p>This course is the equivalent of an introductory college-level course. Students explore the operations and structure of the U.S. government and the behavior of the electorate and politicians. Students gain the analytical perspective necessary to evaluate political data, hypotheses, concepts, opinions, and processes and learn how to gather data about political behavior and develop their own theoretical analysis of American politics. Students also build the skills they need to examine general propositions about government and politics, and to analyze specific relationships between political, social, and economic institutions. Students prepare for the AP Exam and for further study in political science, law, education, business, and history.</p> <p>Course Length: One semester Prerequisite: Honors U.S. History (or equivalent); and teacher/ counselor recommendation</p>
HST520E3: AP® MACROECONOMICS	History Core	<p>This course is the equivalent of an introductory college-level course. Students learn why and how the world economy can change from month to month, how to identify trends in our economy, and how to use those trends to develop performance measures and predictors of economic growth or decline. Students also examine how individuals and institutions are influenced by employment rates, government spending, inflation, taxes, and production. Students prepare for the AP Exam and for further study in business, political science, and history.</p> <p>Course Length: One semester Prerequisites: Summit Algebra 2 Honors (or equivalent); and teacher/school counselor recommendation</p>

Course Name	Subject	Course Description
HST530E3: AP® MICROECONOMICS	History Core	This course is the equivalent of an introductory college-level course. Students explore the behavior of individuals and businesses as they exchange goods and services in the marketplace. Students learn why the same product can cost different amounts at different stores, in different cities, and at different times. Students also learn to spot patterns in economic behavior and learn how to use those patterns to explain buyer and seller behavior under various conditions. Lessons promote an understanding of the nature and function of markets, the role of scarcity and competition, the influence of factors such as interest rates on business decisions, and the role of government in the economy. Students prepare for the AP® exam and further study in business, history, and political science. Course Length: One semester Prerequisites: Success in: Summit Algebra 2 Honors (or equivalent); and teacher/school counselor recommendation
HST540E3: AP® PSYCHOLOGY	History Elective	AP Psychology provides an overview of current psychological research methods and theories. Students will explore the therapies used by professional counselors and clinical psychological and examine the reasons for normal human reactions: how people learn and think, the process of human development and human aggression, altruism, intimacy, and self-reflections. They will study core psychological concepts, such the brain and sense functions, and learn to gauge human reactions, gather information, and form meaningful syntheses. The course exposes students to facts, research, appropriate terminology, and major figures in the world of psychology. The equivalent of a 100-level college survey course, AP Psychology prepares students for the AP Exam and for further studies in psychology and life sciences. The content aligns to the College Board Course and Exam Description for Psychology. Course Length: One semester Prerequisites: SCI204: Honors Biology (or equivalent) and teacher/school counselor recommendation
HST550E1: AP® HUMAN GEOGRAPHY	History Elective	In this course, students will identify and define the central themes of human geography and ways in which key concepts in AP Human Geography are linked together. This course prepares for the AP® Human Geography exam. Course Length: Two semesters Prerequisites: Success in a previous history course and teacher/ school counselor recommendation
OTH010: SUMMIT SKILLS FOR HEALTH	Health & PE	This course focuses on important skills and knowledge in nutrition; physical activity; the dangers of substance use and abuse; sex education; injury prevention and safety; growth and development; and personal health, environmental conservation, and community health resources. The curriculum is designed around topics and situations that engage student discussion and motivate students to analyze internal and external influences on their health-related decisions. The course helps students build the skills they need to protect, enhance, and promote their health and the health of others. Course Length: One semester
OTH020: SUMMIT PHYSICAL EDUCATION	Health & PE	This course combines online instructional guidance with student participation in weekly cardiovascular, aerobic, muscle- toning, and other activities. Students fulfill course requirements by keeping weekly logs of their physical activity. The course promotes the value of lifetime physical activity and includes instruction in injury prevention, nutrition, and yet, stress management. Students may enroll in the course for either one or two semesters and repeat for further semesters as needed to fulfill state requirements. Course Length: Two semesters

Course Name	Subject	Course Description
WLG100: SPANISH I	World Language	<p>Students begin their introduction to Spanish by focusing on the four key areas of world language study: listening, speaking, reading, and writing. The course represents an ideal blend of language learning pedagogy and online learning. Each unit consists of a new vocabulary theme and grammar concept, reading, and listening comprehension activities speaking and writing activities, multimedia cultural presentations, and interactive activities and practices which reinforce vocabulary and grammar. There is a strong emphasis on providing context and conversational examples for the language concepts presented in each unit. Students should expect to be actively engaged in their own language learning, become familiar with common vocabulary terms and phrases, comprehend a wide range of grammar patterns, participate in simple conversations and respond appropriately to basic conversational prompts, analyze and compare cultural practices, products, and perspectives of various Spanish-speaking countries, and take frequent assessments where their language progression can be monitored.</p> <p>Course Length: Two semesters</p>
WLG200: SPANISH II	World Language	<p>Students continue their study of Spanish by further expanding their knowledge of key vocabulary topics and grammar concepts. Students not only begin to comprehend listening and reading passages more fully, but they also start to express themselves more meaningfully in both speaking and writing. Each unit consists of a new vocabulary theme and grammar concept, reading, and listening comprehension activities speaking and writing activities, multimedia cultural presentations, and interactive activities and practices which reinforce vocabulary and grammar. There is a strong emphasis on providing context and conversational examples for the language concepts presented in each unit. Students should expect to be actively engaged in their language learning, understand common vocabulary terms and phrases, use a wide range of grammar patterns in their speaking and writing, participate in conversations and respond appropriately to conversational prompts, analyze and compare cultural practices, products, and perspectives of various Spanish-speaking countries, and take frequent assessments where their language progression can be monitored. By semester 2, the course is conducted almost entirely in Spanish.</p> <p>Course Length: Two semesters</p> <p>Prerequisites: WLG100: Spanish I, Middle School Spanish 1 and 2 (or equivalents)</p>
WLG300: SPANISH III	World Language	<p>Students further deepen their understanding of Spanish by focusing on the three modes of communication: interpretive, interpersonal, and presentational. Each unit consists of a variety of activities that teach the student show to understand more difficult written and spoken passages, to communicate with others through informal speaking and writing interactions, and to express their thoughts and opinions in more formal spoken and written contexts. Students should expect to be actively engaged in their own language learning, use correct vocabulary terms and phrases naturally, incorporate a wide range of grammar concepts consistently and correctly while speaking and writing, participate in conversations covering a wide range of topics and respond appropriately to conversational prompts, analyze and compare cultural practices, products, and perspectives of various Spanish-speaking countries; read and analyze important pieces of Hispanic literature: and take frequent assessments by which their language progression can be monitored.</p> <p>Course Length: Two semesters</p> <p>Prerequisite: WLG200: Spanish II (or equivalent)</p>
WLG140: CHINESE I	World Language	<p>Students begin their introduction to Chinese by focusing on the four key areas of world language study: listening, speaking, reading, and writing. The course represents an ideal blend of language learning pedagogy and online learning.</p> <p>Each unit consists of a new vocabulary theme and grammar concept, reading, and listening comprehension activities speaking and writing activities, multimedia cultural presentations, and interactive activities and practices which reinforce vocabulary and grammar. There is a strong emphasis on providing context and conversational examples for the language concepts presented in each unit. Both Chinese characters and pinyin are presented together through the course and specific character practices are introduced after the first quarter. Students should expect to be actively engaged in their own language learning, become familiar with common vocabulary terms and phrases, comprehend a wide range of grammar patterns, participate in simple conversations and respond appropriately to basic conversational prompts, analyze and compare cultural practices, products, and perspectives of various Chinese-speaking regions, and take frequent assessments where their language progression can be monitored.</p> <p>Course Length: Two semesters</p>

Course Name	Subject	Course Description
WLG240: CHINESE II	World Language	<p>Students continue their study of Chinese by further expanding their knowledge of key vocabulary topics and grammar concepts. Students not only begin to comprehend listening and reading passages more fully, but they also start to express themselves more meaningfully in both speaking and writing. Each unit consists of a new vocabulary theme and grammar concept, reading, and listening comprehension activities speaking and writing activities, multimedia cultural presentations, and interactive activities and practices which reinforce vocabulary and grammar. There is a strong emphasis on providing context and conversational examples for the language concepts presented in each unit. Character recognition and practice are a key focus of the course, and students are expected to learn several characters in each unit. However, pinyin is still presented with characters throughout the course to aid in listening and reading comprehension. Students should expect to be actively engaged in their own language learning, understand common vocabulary terms and phrases, use a wide range of grammar patterns in their speaking and writing, participate in conversations and respond appropriately to conversational prompts, analyze and compare cultural practices, products, and perspectives of various Chinese-speaking regions, and take frequent assessments where their language progression can be monitored.</p> <p>Course Length: Two semesters Prerequisites: WLG140: Chinese I, Middle School Chinese 1 and 2 (or equivalents)</p>
WLG150: AMERICAN SIGN LANGUAGE I	World Language	<p>Did you know that American Sign Language (ASL) is the third most commonly used language in North America? American Sign Language: Introduction will introduce you to vocabulary and simple sentences, so, that you can start communicating right away. Importantly, you will explore Deaf culture – social beliefs, traditions, history, values and communities influenced by deafness.</p> <p>American Sign Language 1b: Learn to Sign will introduce you to more of this language and its grammatical structures. You will expand your vocabulary by exploring interesting topics like Deaf education and Deaf arts and culture.</p>
WLG 250: AMERICAN SIGN LANGUAGE II	World Language	<p>American Sign Language 2 goes beyond introductory ASL signs. This course helps students form structured sentences and explores how expressions can enhance signs to have meaningful conversations. Students will learn to communicate in everyday situations while learning vocabulary for descriptions, directions, shopping, and dealing with emergency situations. Furthermore, the course will teach students about the Deaf Community, culture, and language. Students will learn about sequencing, transitions, future tenses, and will be able to tell a story, and ask questions.</p>
HST350: FINANCIAL LITERACY	Business Mgmt. Electives	<p>In this course, students will explore their choices as producers, consumers, investors, and taxpayers. Students apply what they learn to real-world simulation problems. In addition, they will learn financial literacy skills emphasizing investments, markets, and taxation. Students will apply what they learn to real-world simulation problems. Topics of study include markets from historical and contemporary perspectives; supply and demand; budgeting; understanding creditworthiness and credit reports; saving options; debt reduction; theories of early economic philosophers such as Adam Smith and David Ricardo; theories of value; money (what it is, how it evolved, and the role of banks, investment houses, and the Federal Reserve); Keynesian economics; how capitalism functions, focusing on productivity, wages, investment, and growth; issues of capitalism, such as unemployment, inflation, and the national debt; profiles of individuals who are making their mark in business and economics; and a survey of markets in such areas as China, Europe, and the Middle East.</p> <p>Course Length: One semester</p>
BUS045: ENTREPRENEURSHIP I	Business Mgmt. Electives	<p>In this introductory business course, students learn the basics of planning and launching their own successful business. Whether they want to start their own money-making business or create a non-profit to help others, this course helps students develop the core skills they need to be successful. They learn how to come up with new business ideas, attract investors, market their business, and manage expenses.</p> <p>Course Length: One semester</p>
BUS055: ENTREPRENEURSHIP II	Business Mgmt. Electives	<p>Students build on the business concepts they learned in Introduction to Entrepreneurship I. Students continue to explore the different functions of business, while refining their technology and communication skills in speaking, writing, networking, negotiating, and listening. The purpose of this course is to prepare students to launch a small business venture.</p> <p>Course Length: One semester Prerequisite: BUS045 Entrepreneurship I</p>

Course Name	Subject	Course Description
BUS065: MARKETING 1	Business Mgmt. Electives	Students find out what it takes to market a product or service in today's fast-paced business environment. They learn the fundamentals of marketing using real-world business examples. They learn about buyer behavior, marketing research principles, demand analysis, distribution, financing, pricing, and product management. Course Length: One semester
BUS075: MARKETING 2	Business Mgmt. Electives	Students build on the skills and concepts learned in Introduction to Marketing I to develop a basic understanding of marketing principles and techniques. By the end of the course, students will understand what it takes to start a small business venture. Course Length: One semester Prerequisite: BUS065 Marketing 1 or BUS065-PBL Marketing 1
BUS080: INTERNATIONAL BUSINESS	Business Mgmt. Electives	From geography to culture, global business is an exciting topic in the business community today. This course is designed to help students develop the appreciation, knowledge, skills, and abilities needed to live and work in the global marketplace. It takes a global view on business, investigating why and how companies go international and are more interconnected. The course further provides students a conceptual tool by which to understand how economic, social, cultural, political, and legal factors influence both domestic and cross-border business. Students explore business structures, global entrepreneurship, business management, marketing, and the challenges of managing international organizations. They also cultivate studies, research skills, and continuing education are important in twenty-first-century business activities. Course Length: One semester
BUS090: SPORTS AND ENTERTAINMENT MARKETING	Business Mgmt. Electives	Students who have wished to play sports professionally or who have dreamed of becoming an agent for a celebrity entertainer have an interest in sports and entertainment marketing. Although this form of marketing bears some resemblance to traditional marketing, there are many differences as well— including a lot more glitz and glamour! In this course, students can explore basic marketing principles and develop deeper into the multibillion-dollar sports and entertainment marketing industry. Students learn how professional athletes, sports teams, and well-known entertainers are marketed as commodities and how some of them become billionaires as a result. For students who have ever wondered about how things work behind the scenes of a major sporting event such as the Super Bowl or even entertained the idea of playing a role in such an event, this course introduces the fundamentals of such a career. Course Length: One semester
BUS091: SPORTS AND ENTERTAINMENT MARKETING 2	Business Mgmt. Electives	"Five, four, three, two, one—rest." You've learned what it looks like to work one-on-one with clients as a sports medicine professional, and now it's time to focus on the group. In this course, you will be introduced to teaching group exercise classes and providing rehabilitation services to clients facing injury and disease. You will also learn about laws that govern the work of sports medicine professionals, business concerns like insurance and staffing, and what you need to consider if you start your own fitness facility
BUS113: ACCOUNTING 1	Business Mgmt. Electives	This is the first semester of a two-semester course. The course teaches accounting while placing emphasis on conceptual understanding and financial statement analysis to encourage students to apply accounting concepts to real-world situations and make informed business decisions. Topics include transactions and methods of accounting for both service and merchandising businesses. Accounting 1 prepares students for the NOCTI Accounting-Basic credential. Course Length: One semester

Course Name	Subject	Course Description
BUS114: ACCOUNTING 2	Business Mgmt. Electives	This is the second semester of a two-semester course. The course continues to teach accounting while placing emphasis on conceptual understanding and financial statement analysis to encourage students to apply accounting concepts to real-world situations and make informed business decisions. Topics include transactions and methods of accounting for both service and merchandising businesses. Accounting 2 prepares students for the NOCTI Accounting-Advanced credential. Course Length: One semester Prerequisite: BUS113 Accounting 1
BUS210: PROFESSIONAL SALES AND PROMOTION	Business Mgmt. Electives	"Sell me this pen." It seems like an easy request, but the art of selling takes nuance, expertise, and an ability to navigate the complexities of client needs. In this course, you'll learn about the bigger picture of the sales cycle. You'll examine the role of today's sales professional along with the skills and qualities needed for success, and you'll learn the ins and outs of the sales process and how it is driven by recognizing and responding to customer needs. Before long, you'll be a part of the well-oiled engine that drives the entire commercial economy. But first, can you sell me this pen?  Course Length: One semester
BUS110: SOCIAL MEDIA MARKETING	Business Mgmt. Electives	Whether it's posting pictures, videos, or interacting in the metaverse, today's students who aspire to apply their social media skills to business marketing must be prepared! This course on Social Media Business Marketing provides them with the foundational knowledge of social media technology and marketing principles. The course begins with an introduction to Social Media platforms and then goes in-depth into the marketing and advertising strategies used to support a company's social media strategy and campaigns. Through activities and projects, students will gain firsthand knowledge of this exciting field. This course also prepares students for the Social Media Strategist certification."
TCH028: DIGITAL ARTS I	Tech Electives	In this exploratory course, students learn the elements and principles of design as well as foundational concepts of visual communication. While surveying a variety of media and art, students use image editing, animation, and digital drawing to put into practice the art principles they've learned. They explore career opportunities in the design, production, display, and presentation of digital artwork. They respond to the artwork of others and learn how to combine artistic elements to create finished pieces that effectively communicate their ideas. Course Length: One semester
TCH029: DIGITAL ARTS II	Tech Electives	Students build on the skills and concepts they learned in Digital Arts as they develop their vocabulary of digital design elements. By the end of the course, they will have created a collection of digital art projects for their digital design portfolio. Course Length: One semester Prerequisite: TCH028: Digital Arts I
TCH031E2: DIGITAL PHOTOGRAPHY I	Tech Electives	Have you wondered how professional photographers manage to capture that perfect image? Gain a better understanding of photography by exploring camera functions and the elements of composition while putting theory into practice by taking your own spectacular shots! Learn how to display your work for exhibitions and develop skills important for a career as a photographer. Course Length: One semester
TCH032E2: DIGITAL PHOTOGRAPHY II	Tech Electives	Building on the prior prerequisite course, further develop your photography skills by learning more professional tips, tricks, and techniques to elevate your images. Explore various photographic styles, themes, genres, and artistic approaches. Learn more about photojournalism and how to bring you photos to life. Using this knowledge, build a portfolio of your work to pursue a career in this field! Course Length: One semester Prerequisite: TCH031 Digital Photography 1

Course Name	Subject	Course Description
TCH035: IMAGE DESIGN & EDITING	Tech Electives	This introductory design course is for students who want to create compelling, professional-looking graphic designs and photos. Students learn the basics of composition, color, and layout through the use of hands-on projects that allow them to use their creativity while developing important foundational skills. They use GIMP software to create a graphic design port that follows it has wide variety of projects involving the mastery of technical topics such as working with layers and masks, adding special effects, and effectively using typefaces to create visual impact. The projects help students develop the skills they need to reattended images of their own. Course Length: One semester
TCH076: 3D MODELING 1	Tech Electives	Heart valves, cars, cartoons, and buildings may not seem to have much in common, but they all share one spectacular attribute: all originated as a 3D model. 3D modeling has changed the way the world makes things, and in this course, you'll learn the basics to begin creating in 3D! You'll learn how different 3D models are built and how to practice using a variety of modeling methods. By the end of the course, you'll walk away with a portfolio of your ingenious modeling ideas. 3D modeling is an essential part of the modern world and soon, you'll be able to contribute yourself! Course Length: One semester
TCH077: 3D MODELING 2	Tech Electives	Many buildings that are rendered in the real world first are constructed in a digital 3D world that depicts the aesthetics, environment, and conditions of what will come to be. In this course, you will be introduced to the tools and techniques needed to create works of 3D art. You will bring your objects to life with color, textures, lighting, and shadow all while simulating the movement of world around. Are you ready to bring beautiful objects to life in a 3D world? Let's get started today! Course Length: One semester Prerequisite: TCH076
TCH083: ANIMATION 1	Tech Electives	Have you ever watched a cartoon or played a video game where the animation of characters captivated you so much you wanted to create your own? If so, it's time to immerse yourself in the world of animation. Meet the industry players such as directors, animators, and 3D modelers. Develop your story by exploring design, the 12 principles of animation, creating a storyboard, and leveraging the tools of the trade. Let's being your story to life with animation! Course Length: Two semesters
TCH171 Software Apps: PowerPoint with Cert Prep	Tech Electives	TCH171 Software Apps: PowerPoint with Exam Prep prepares students for the Microsoft Office Specialist Exam. This course introduces users to PowerPoint 2019 and covers: managing presentations, slides, text, shapes, and images, tables, charts, and SmartArt, 3D models and media, and transitions and animations. Students will learn basic terminology, modify slide masters and layouts, add/remove properties, set up slide shows and print options, use zoom techniques, add headers and footers, apply formatting and styles, insert hyperlinks and sections, resize and crop images, create shapes, insert audio/video clips, and set transition/animation effects and motion paths.
TCH105 COMPUTER LITERACY	Tech Electives	In this introductory course, students become familiar with the basic principles of a personal computer, including the internal hardware, operating system, and software applications. Students gain practice in using key applications such as word processing, spreadsheet, and presentation software, as well as understand social and ethical issues around the Internet, information, and security. Course Length: One Semester
TCH172 Software Apps: Word with Cert Prep	Tech Electives	TCH172 Software Apps: Word with Exam Prep prepares students for the Microsoft Office Specialist Exam. This course teaches learners how to use the Word Application Interface and familiarize themselves with Word options. It covers topics such as navigating and customizing the ribbon, editing documents, formatting text, managing comments, and tracking changes to create professional documents.

Course Name	Subject	Course Description
TCH160: INTRODUCTION TO ROBOTICS	Tech Electives	<p>Are you fascinated with how machines work? Robots are machines, and they are all around us, from helping doctors in surgeries to helping to keep our homes clean. Explore the physics, mechanics, motion, and the engineering design and construction aspects used to develop robots. Learn how models are created through both sketches and software. Discover STEM careers and the education needed to enter this high demand field.</p> <p>Course Length: One semester</p>
TCH162: INTRODUCTION TO ROBOTICS 2	Tech Electives	<p>The robots have invaded... and they're here to make our lives easier. You've learned about the basics of robotics and STEM careers, but now we're going to learn about manipulating the physical world to create desired effects. In this course, you'll learn to manipulate electrical signals to create logic and memory, how to quantify the physical world through variables, and how to have an impact through tools. You'll discover how to choose the best tools and materials, how to create AI, and how to take an idea from initial planning to a completed project. Let's continue the pursuit of a career in robotics so the friendly invasion can thrive!</p> <p>Course Length: One semester Prerequisite: TCH160</p>
TCH220: Software Apps Excel with Exam Prep	Tech Electives	<p>TCH220 Software Apps: Excel with Exam Prep is MSi curriculum that prepares students for the Microsoft Office Specialist Exam. This course introduces students to the Excel application interface and covers topics related to managing worksheets and workbooks, data cells and ranges, tables and table data, formulas and functions, and charts. Students will learn how to import external data, create, and edit named ranges, apply number formats, create charts, and format text using functions. They will also learn to add and modify chart elements and apply chart styles. Upon completion of this course, students will be able to navigate the Excel application interface, create formulas, manipulate data, and create charts.</p>
TCH0175 Digital Media: Photoshop with Exam Prep	Tech Electives	<p>TCH175 Digital Media: Photoshop with Exam Prep prepares students for the Adobe Certified Professional Exam. The course covers the fundamentals of working in the design industry. It will familiarize students with the key terminology related to digital images, introduce them to the purpose, audience, and needs of preparing images, and teach them basic design principles and best practices. The course will also cover project setup and interface, document organization, creating and modifying visual elements, and publishing digital media. Students will be exposed to using layers, modifiable visibility, and nonprinting design tools; importing assets; managing colors, swatches, gradients, brushes, symbols, styles, and patterns, understanding destructive and nondestructive editing; and preparing images for export.</p>
TCH323E2: INTRODUCTION TO JAVA PROGRAMMING	Tech Electives	<p>TCH323 Introduction to Java 1 is a CodeHS course that teaches students the basics of object-oriented programming with a focus on problem-solving and algorithm development. Students learn basic Java methods, data structures, classes, and object-oriented programming in this course. It is the first course in a two-course sequence and should be completed before TCH324 Introduction to Java 2.</p> <p>Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Several units have free-response questions that have students consider the applications of programming and incorporate examples from their own lives.</p> <p>At the end of each unit, students take a summative multiple-choice unit quiz that assesses their knowledge of the Java concepts covered in the unit. Included in each lesson is a formative short multiple-choice quiz.</p> <p>Course Length: One semester Prerequisites: TCH220-PBL Computer Science Principles or other introduction to computer science, Algebra 1</p>

Course Name	Subject	Course Description
TCH174 Digital Media: Illustrator with Exam Prep	Tech Electives	<ul style="list-style-type: none"> <li>o Courseware is designed for use in middle and high schools, and students can choose to work directly within the software or in a simulated environment (meaning that you do not have to have software installed on the computer).</li> <li>o Students will use a combination of written and video tutorials, quizzes, projects, and assessments throughout the course.</li> <li>o Dynamic grading tracks student progress automatically. Each course includes a comprehensive e-Textbook that can be used to inform discussions or assigned as homework.</li> <li>o All courses are aligned with current industry-based certifications and test prep is included</li> </ul>
TCH342E2: PYTHON PROGRAMMING 1	Tech Electives	<p>TCH342 Python Programming 1 is a CodeHS course that teaches the fundamentals of computer programming as well as some advanced features of the Python language. Students will develop an appreciation for how computers store and manipulate information by building simple console-based games. It is the first course in a two- course sequence and should be completed before TCH343 Introduction to Python Programming 2. Once students complete the Introduction to Python course, they will have learned material equivalent to a semester college introductory course in Computer Science and be able to program in Python. Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Several units have free response questions that have students consider the applications of programming and incorporate examples from their own lives. Course Length: One semester</p>
TCH343E3: PYTHON PROGRAMMING 2	Tech Electives	<p>TCH343 Python Programming 2 is a CodeHS course that teaches the fundamentals of computer programming as well as some advanced features of the Python language. Students will develop an appreciation for how computers store and manipulate information by building simple console-based games. It is the second course in a two- course sequence and should be completed after TCH342 Introduction to Python Programming 1. Once students complete the Introduction to Python course, they will have learned material equivalent to a semester college introductory course in Computer Science and be able to program in Python. Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Several units have free- response questions that have students consider the applications of programming and incorporate examples from their own lives. Course Length: One semester Prerequisite: TCH342 Python Programming 1</p>
TCH370: WEB DEVELOPMENT	Tech Electives	<p>The Web Development Capstone Course is intended to teach students the fundamentals of development in a project-based learning environment. Students will be taught the basic elements of web development, such as web hosting, file organization, and incorporating JavaScript into HTML files. Over the course of the school will collaboratively and independently design, develop and implement functional and responsive webpages using these foundational skills. Course Length: Two semesters</p>
TCH430E1 Digital Media: Animate with Exam Prep	Tech Electives	<ul style="list-style-type: none"> <li>o Moore Solutions offers turnkey solutions designed to meet the needs of educators and students across a variety of education environments.</li> <li>o Courseware is designed for use in middle and high schools, and students can choose to work directly within the software or in a simulated environment (meaning that you do not have to have software installed on the computer).</li> <li>o Students will use a combination of written and video tutorials, quizzes, projects, and assessments throughout the course.</li> <li>o Dynamic grading tracks student progress automatically. Each course includes a comprehensive e-Textbook that can be used to inform discussions or assigned as homework.</li> <li>o Instructor resources are provided including scope and sequence and a pacing guide.</li> <li>o All courses are aligned with current industry-based certifications and test prep is included</li> </ul>

Course Name	Subject	Course Description
TCH520: DATA STRUCTURES IN C++ 1	Tech Electives	<p>TCH520 Data Structures in C++ 1 focuses on different ways to store data, beyond traditional variables and lists. In this course, students will learn about advanced data structures, such as queues, while applying them in larger, real-world assignments and projects.</p> <p>The Data Structures in C++ 1 course is designed for students that have previously completed a full year computer science course, such as AP CSA. While C++ is used as the language for the course, the focus of the course is on understanding and applying advanced data structures. Prior C++ knowledge is not a prerequisite; however, students should have a working knowledge of basic computer science concepts such as variables, control structures, and functions/methods in at least one programming language. The course utilizes a blended classroom approach. The content is fully web-based, with students writing and running code in the browser. Teachers utilize tools and resources provided by CodeHS to leverage time in the classroom and give focused 1-on-1 attention to students. Each unit of the course is broken down into lessons. Lessons consist of tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice and projects in total. Each unit ends with a comprehensive unit test that assesses a student's mastery of the material from that unit. Students write and run C++ programs in the browser using the CodeHS editor.</p> <p>Course Length: One semester</p>
TCH521: DATA STRUCTURES IN C++ 2	Tech Electives	<p>TCH521 Data Structures in C++ 2 focuses on different ways to store data, beyond traditional variables and lists. In this course, students will learn about advanced data structures such as maps, sets, etc. while applying them in larger, real-world assignments and projects. The Data Structures in C++ 2 course is designed for students that have previously completed Data Structures in C++ 1. The course utilizes a blended classroom approach. The content is fully web-based, with students writing and running code in the browser. Teachers utilize tools and resources provided by CodeHS to leverage time in the classroom and give focused 1-on-1 attention to students. Each unit of the course is broken down into lessons. Lessons consist of tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice and projects in total. Each unit ends with a comprehensive unit test that assesses a student's mastery of the material from that unit. Students write and run C++ programs in the browser using the CodeHS editor.</p> <p>Course Length: One semester</p>
BUS110: SOCIAL MEDIA MARKETING	Tech Electives	<p>Whether it's posting pictures, videos, or interacting in the metaverse, today's students who aspire to apply their social media skills to business marketing must be prepared! This course on Social Media Business Marketing provides them with the foundational knowledge of social media technology and marketing principles. The course begins with an introduction to Social Media platforms and then goes in-depth into the marketing and advertising strategies used to support a company's social media strategy and campaigns. Through activities and projects, students will gain firsthand knowledge of this exciting field. This course also prepares students for the Social Media Strategist certification."</p>
TCH500E2 A & B: AP COMPUTER SCIENCE PRINCIPLES	Tech Electives	<p>TCH500 AP Computer Science Principles introduces students to the foundational concepts of computer science and explores the impact computing and technology have on our society. With a unique focus on creative problem solving and real-world applications, AP Computer Science Principles gives students the opportunity to explore several important topics of computing using their own ideas and creativity, use the power of computing to create artifacts of personal value, and develop an interest in computer science that will foster further endeavors in the field.</p> <p>Each unit of the course is broken down into lessons. Lessons consist of video tutorials, short quizzes, examples programs to explore, written programming exercises, free response exercise, collaborative creation projects, and research projects.</p> <p>Course Length: Two semesters Prerequisites: Algebra I, TCH220</p>

Course Name	Subject	Course Description
TCH510E2 A & B: AP COMPUTER SCIENCE A	Tech Electives	TCH510 AP Computer Science introduces students to computer science through programming. Fundamental topics in this course include the design of solutions to problems, the use of data structures to organize large sets of data, the development and implementation of algorithms to process data and discover new information, the analysis of potential solutions, and the ethical and social implication of computing systems. The course emphasizes object-oriented programming and design using the Java programming language. Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Several units have free-response questions that have students consider the applications of programming and incorporate examples from their own lives. Course Length: Two semesters Prerequisites: Algebra I
AGR105: Agriscience 1: Introduction	Tech Ed Electives	The word “agriculture” often evokes images of farms, fields, and livestock, and while all of these representations are correct and essential, the field of Agriculture is so much more! In Agriscience I: Introduction, you’ll explore how Agri scientists play key roles in improving agriculture, food production, and the conservation of natural resources along with the technologies used to keep the field thriving. Are you ready to explore the diverse careers in agriscience and how you can prepare to positively impact the planet? Let’s get growing! Course Length: One semester
COM230: INTRO TO JOURNALISM 1	Tech Ed Electives	Does your curiosity lead you to the heart of the matter? Channel this curiosity into developing strong writing, critical thinking, and research skills to perform interviews and write influential pieces, such as articles and blog posts. Learn about the evolution of journalism and its ethics, bias, and career directions to forge your path in this field. Course Length: One semester
COM231: JOURNALISM: INVESTIGATING THE TRUTH 2	Tech Ed Electives	Journalists are asked to tell the world a story every single day—and their job is to tell the truth. Learn how to choose a topic, structure your story, research facts, hone your observational skills, and write an article following journalism tradition. Go beyond the print world and discover how journalism can lead to exciting careers that will put you right in the action.
HST020: PSYCHOLOGY	Tech Ed Electives	In this one-semester course, students investigate why human beings think and act the way they do. This is an introductory course that broadly covers several areas of psychology. Instructional material presents theories and current research for students to critically evaluate and understand. Each unit introduces terminology, theories, and research that are critical to the understanding of psychology and includes tutorials and interactive exercises. Students learn how to define and use key psychology terms and how to apply psychological principles to their own lives. Unit topics include Methods of Study, Biological Basis for Behavior, Learning and Memory, Development and Individual Differences, and Psychological Disorders. Course Length: One semester
LAW110: CAREERS IN CRIMINAL JUSTICE 1	Tech Ed Electives	Have you ever wondered what steps take place as people move through the court system? The criminal justice system is a very complex field that requires dedicated people willing to pursue equal justice for all. Explore different career choices and how the juvenile justice system, the correctional system, and the trial process all work together to maintain social order. Course Length: One semester
LAW111: CAREERS IN CRIMINAL JUSTICE 2	Tech Ed Electives	Have you ever thought about a career as a police officer, an FBI or DEA agent, or any occupation that seeks to pursue justice for all? Careers in criminal justice can be found at local, county, state, and federal levels, and even in the private sector. Explore some of the various occupations in this field, while simultaneously learning how they interact with each other and other first responders. Discover various interviewing techniques to uncover the truth. Understand the importance of making ethical decisions, and how you need to keep your sense of right and wrong in check to be successful in this field. Course Length: One semester Prerequisite: LAW110

Course Name	Subject	Course Description
OTH091: LAW AND ORDER	Tech Ed Electives	Every society has laws that its citizens must follow. From traffic laws to regulations on how the government operates, laws help provide society with order and structure. Our lives are guided and regulated by our society's legal expectations. Consumer laws help protect us from faulty goods; criminal laws help protect society from individuals who harm others, and family law handles the arrangements and issues that arise in areas like divorce and child custody. This course focuses on the creation and application of laws in various areas of society. By understanding the workings of our court system, as well as how laws are carried out, students become more informed and responsible citizens. Course Length: One semester
OTH033: VETERINARY SCIENCE	Tech Ed Electives	As animals play an increasingly important role in our lives, scientists have sought to learn more about their health and well-being. Taking a look at the pets that live in our homes, on our farms, and in wildlife sanctuaries, this course examines some of the common diseases and treatments for domestic animals. Toxins, parasites, and infectious diseases affect not only the animals around us, but at times, us humans as well! Through veterinary medicine and science, the prevention and treatment of diseases and health issues are studied and applied. Course Length: One semester
OTH0171: CULINARY ARTS 1	Tech Ed Electives	Thinking of a career in the foodservice industry or looking to develop your culinary skills? This introductory course will provide you with basic cooking and knife skills while preparing you for entry into the culinary world. Discover the history of food culture, food service, and global cuisines while learning about food science principles and preservation. Finally, prepare for your future by building the professional, communication, leadership, and teamwork skills that are critical to a career in the culinary arts. Course Length: One semester
OTH0172: CULINARY ARTS 2	Tech Ed Electives	Did you know that baking is considered a science? Building on the prior prerequisite course, discover how to elevate your culinary skills through the creation of stocks, soups, sauces, and learn baking techniques. Examine sustainable food practices and the benefits of nutrition while maintaining taste, plating, and presentation to truly wow your guests. The last unit in this course explores careers in the culinary arts for ways to channel your newfound passion! Course Length: One semester Prerequisite: OTH0171 Culinary Arts 1
SCI020: ASTRONOMY 1	Tech Ed Electives	Follow your enthusiasm for space by introducing yourself to the study of astronomy. This course will include topics such as astronomy's history and development, basic scientific laws of motion and gravity, the concepts of modern astronomy, and the methods used by astronomers to learn more about the universe. Further knowledge is gained through the study of galaxies, stars, and the origin of the universe. Course Length: One semester
SCI021: ASTRONOMY 2	Tech Ed Electives	Building upon the prior prerequisite course, dive deeper into the universe and develop a lifelong passion for space exploration and investigation. Become familiar with the inner and outer planets of the solar system as well as the sun, comets, asteroids, and meteors. Additional topics include space travel and settlements as well as the formation of planets. Course Length: One semester Prerequisite: SCI020: Astronomy 1
TCH130: FOUNDATIONS OF ENGINEERING SCIENCE	Tech Ed Electives	This course outlines the foundational skills and principles necessary for success in engineering. Students explore teamwork dynamics and leadership roles, progressing to understand mathematical concepts like algebra, geometry, statistics, and probability as they relate to engineering. Students gain hands-on experience in conducting experiments, analyzing data, and designing prototypes. Additionally, students explore fluid power systems, basic construction techniques, and emerging trends in the industry.

Course Name	Subject	Course Description
HLT213: MEDICAL TERMINOLOGY 1	Health Science Electives	This course simplifies the process of memorizing complex medical terminology by focusing on the important word parts— common prefixes, suffixes, and root words—that provide a foundation for learning hundreds of medical terms. Organized by body systems, the course follows a logical flow of information: an overview of the body system's structures and functions, a summary of applicable medical specialties, and ultimately pathology, diagnostic, and treatment procedures. Course Length: One semester
HLT214: MEDICAL TERMINOLOGY 2	Health Science Electives	This course simplifies the process of memorizing complex medical terminology by focusing on the important word parts— common prefixes, suffixes, and root words—that provide a foundation for learning hundreds of medical terms. Organized by body systems, the course follows a logical flow of information: an overview of the body system's structures and functions, a summary of applicable medical specialties, and ultimately pathology, diagnostic, and treatment procedures. Course Length: One semester Prerequisite: HLT213 Medical Terminology 1
OTH092: HEALTH SCIENCES I	Health Science Electives	Will we ever find a cure for cancer? What treatments are best for conditions like diabetes and asthma? How are illnesses like meningitis, tuberculosis, and measles identified and diagnosed? Health sciences provide the answers to questions such as these. This course introduces students to the various disciplines within the health sciences, including toxicology, clinical medicine, and biotechnology. Students explore the importance of diagnostics and research in the identification and treatment of diseases. The course presents information and terminology for the health sciences and examines the contributions of different health science areas. Course Length: One semester
OTH094: HEALTH SCIENCES II	Health Science Electives	Challenging. Variable. Rewarding. These three words can be used to describe many careers in the health sciences. In this course, students will learn more about what it takes to be a successful health science professional, including how to communicate with patients. You will explore the rights and responsibilities of both patients and health sciences professionals in patient care and learn more about how to promote wellness among patients and healthcare staff. Finally, students will learn more about safety in health sciences settings and the challenges and procedures of emergency care, infection control, and blood borne pathogens. Course Length: One semester Prerequisite: OTH092 Health Sciences I
OTH161 EARLY CHILDHOOD EDUCATION 1	Health Science Electives	Are you curious to see what it takes to educate and nurture early learners? Use your curiosity to explore the fundamentals of childcare, like nutrition and safety, but also the complex relationships caregivers have with parents and their children. Examine the various life stages of child development and the best educational practices to enrich their minds while thinking about a possible future as a childcare provider! Course Length: One semester
OTH162 EARLY CHILDHOOD EDUCATION 2	Health Science Electives	Building on the previous prerequisite course, discover the joys of providing exceptional childcare and helping to develop future generations. Learn the importance of play and use it to build engaging educational activities that build literacy and math skills through each stage of childhood and special needs. Use this knowledge to develop your professional skills well suited to a career in childcare! Course Length: One semester Prerequisite: OTH161 Early Childhood Education 1
ART010: SUMMIT FINE ART	Art Electives	This course combines art history, appreciation, and analysis while engaging students in hands-on creative projects. Lessons introduce major periods and movements in art history while focusing on masterworks and the intellectual, technical, and creative processes behind those works. Studio lessons provide opportunities for drawing, painting, sculpting, and other creative endeavors. Course Length: Two semesters Prerequisite: HST103: World History (or equivalent) is recommended as a prerequisite or co-requisite, but not required

Course Name	Subject	Course Description
ART020: SUMMIT MUSIC APPRECIATION	Art Electives	<p>This course introduces students to the history, theory, and genres of music. The first semester covers basic music theory concepts as well as early musical forms, classical music, patriotic and nationalistic music, and 20th-century music. The second semester presents modern traditions, including American jazz, gospel, folk, soul, blues, Latin rhythms, rock and roll, and hip hop. The course explores the history of music, from the surviving examples of rudimentary musical forms through to contemporary pieces from around the world. To comply with certain state standards for the arts, a student “performance practicum” is required for full credit each semester. The performance practicum requirement can be met through participation in supervised instrumental or vocal lessons, church or community choirs, community musical performances, or any other structured program that meets at regular intervals and provides opportunities for students to build vocal and/or instrumental skills. Parents or guardians will be required to present their student's proposed practicum to the students’ teachers for approval and validate their student's regular participation in the chosen performance practicum.</p> <p>Course Length: Two semesters</p>
ENG030: SUMMIT CREATIVE WRITING	Art Electives	<p>In this course, students explore a range of creative writing genres, including fiction, poetry, creative nonfiction, drama, and multimedia writing. They study examples of classic and contemporary selections, apply what they learn to their own writing, and develop proficiency in the writing process. They learn to evaluate the writings of others and apply evaluation criteria to their own work. By the end of the course, students will have created a well-developed portfolio of finished written works.</p> <p>Course Length: Two semesters</p>
HST060: SOCIOLOGY	Art Electives	<p>Human beings are complex creatures, and when we interact and begin to form relationships and societies, things become even more complicated. Are we more likely to act differently in a group than we will when we’re alone? How do we learn how to be “human”? Examine answers to these questions and many more as you explore culture, group behavior, and societal institutions and how they affect human behavior.</p>
OTH095: MYTHOLOGY AND FOLKLORE	Art Electives	<p>Mighty heroes. Angry gods and goddesses. Cunning animals. Since the first people gathered around fires, mythology and folklore have been used to make sense of humankind and our world. Beginning with an overview of mythology and different kinds of folklore, students will journey with ancient heroes as they slay dragons and outwit gods, follow fearless warrior women into battle, and watch as clever monsters outwit those stronger than themselves. They will explore the universality and social significance of myths and folklore and see how these are still used to shape society today.</p> <p>Course Length: One semester</p>
ENG020: SUMMIT PUBLIC SPEAKING	Student Development Electives	<p>Students are introduced to public speaking as an important component of their academic, work, and social lives. They study public speaking occasions and develop skills as fair and critical listeners, or consumers, of spoken information and persuasion. Students study types of speeches (informative, persuasive, dramatic, and special occasion), read and listen to models of speeches, and prepare and present their own speeches to diverse audiences. Students learn to choose speaking topics and adapt them to specific audiences, to research and support their ideas, and to benefit from listener feedback. They study how to incorporate well-designed visual and multimedia aids in presentations and how to maintain a credible presence in the digital world. Students also learn about the ethics of public speaking and about techniques for managing communication anxiety.</p> <p>Course Length: One semester</p>
OTH040: REACHING YOUR ACADEMIC POTENTIAL	Student Development Electives	<p>Students learn essential academics skills within the context of their learning style, individual learning environment, and long-term goals. This course helps students develop habits for more successful reading, writing, studying, communication, collaboration, time management, and concentration. It also provides insights into how the brain works when they are learning and ways to maximize their potential.</p> <p>Course Length: One semester</p>

Course Name	Subject	Course Description
OTH050: ACHIEVING YOUR CAREER AND COLLEGE GOALS	Student Development Electives	<p>Students explore their options for life after high school and implement plans to achieve their goals. They identify their aptitudes, skills, and preferences and explore a wide range of potential careers. They investigate the training and education required for the career of their choice and create a plan to be sure that their work in high school is preparing them for the next step. They also receive practical experience in essential skills such as searching and applying for college, securing financial aid, writing a resume and cover letter and interviewing for a job. This course is geared toward 11th and 12th graders.</p> <p>Course Length: One semester</p>
MTH113E2: PRE-ALGEBRA	Remediation Electives	<p>In this course, students take a broader look at computational and problem-solving skills while learning the language of algebra.</p> <p>Students extend their understanding of ratio to develop an understanding of proportions and solve problems including scale drawings, percent increase, and decrease, simple interest, and tax. Students extend their understanding of numbers and properties of operations to include rational numbers. Signed rational numbers are contextualized and students use rational numbers in constructing expressions and solving equations. Students derive formulas and solve two-dimensional area problems including the area of composite figures. In three dimensions, students find the surface area using formulas and nets. Students also compute the volume of three-dimensional objects including cubes and prisms. Students make use of sampling techniques to draw inferences about a population including comparative inferences about two populations. Students also investigate chance processes through experimental and theoretical probability models.</p> <p>Course Length: Two semesters</p>

**STRIDE COLLEGE AND CAREER PREP PROGRAM PATHWAY COURSES**

**SUGGESTED FOR ALL PATHWAYS**

TCH171 Software Apps: PowerPoint with Cert Prep	Career Readiness	<p>TCH171 Software Apps: PowerPoint with Exam Prep prepares students for the Microsoft Office Specialist Exam. This course introduces users to PowerPoint 2019 and covers: managing presentations, slides, text, shapes, and images, tables, charts, and SmartArt, 3D models and media, and transitions and animations. Students will learn basic terminology, modify slide masters and layouts, add/remove properties, set up slide shows and print options, use zoom techniques, add headers and footers, apply formatting and styles, insert hyperlinks and sections, resize and crop images, create shapes, insert audio/video clips, and set transition/animation effects and motion paths.</p>
TCH105E2: COMPUTER LITERACY	Career Readiness	<p>In this introductory course, students become familiar with the basic principles of a personal computer, including the internal hardware, operating system, and software applications. Students gain practice in using key applications such as word processing, spreadsheet, and presentation software, as well as understand social and ethical issues around the Internet, information, and security.</p> <p>Course Length: One semester</p>

Course Name	Subject	Course Description
TCH172 Software Apps: Word with Cert Prep	Career Readiness	TCH172 Software Apps: Word with Exam Prep prepares students for the Microsoft Office Specialist Exam. This course teaches learners how to use the Word Application Interface and familiarize themselves with Word options. It covers topics such as navigating and customizing the ribbon, editing documents, formatting text, managing comments, and tracking changes to create professional documents.
TCH 110A: Computer Science JavaScript I	Career Readiness	TCH110A Computer Science: JavaScript I is a CodeHS course that covers the first semester of the Introduction to Computer Science in JavaScript course series. In this course, students are introduced to the foundations of computer science and the basics of programming with the JavaScript language. After completing this course, students develop the skills needed to take the second-semester course in this series. Students learn material equivalent to a semester college introductory course in computer science and can program in JavaScript upon completing both course A and course B in this series.
TCH 110B: Computer Science JavaScript I	Career Readiness	TCH110B Computer Science: JavaScript I is a CodeHS course that covers the second semester of the Introduction to Computer Science in JavaScript course series. Concepts covered in the course include functions, animation, and games. Once students complete this course, they will have learned material equivalent to a semester college introductory course in computer science and be able to program in JavaScript.
TCH177: Software Apps Excel with Exam Prep	Career Readiness	TCH177 Software Apps: Excel with Exam Prep prepares students for the Microsoft Office Specialist Exam. This course introduces students to the Excel application interface and covers topics related to managing worksheets and workbooks, data cells and ranges, tables and table data, formulas and functions, and charts. Students will learn how to import external data, create, and edit named ranges, apply number formats, create charts, and format text using functions. They will also learn to add and modify chart elements and apply chart styles. Upon completion of this course, students will be able to navigate the Excel application interface, create formulas, manipulate data, and create charts.
WBL531: WORK EXPERIENCE 1	Career Readiness	This course seeks to help students blend classroom learning with work practice. This course is designed for students who currently have a job that has been identified as eligible for course credit. Pre-requisite: Student enrollment MUST be approved by SCP Coordinator.
WBL541: STUDENT-LED BUSINESS	Career Readiness	This course seeks to help students blend classroom learning with work practice. By enrolling in this course, students will earn credit for their business development experience. Additional resources to support students' business may be provided through this course. This course is designed for students who have started their own business or have developed a business plan to start their own business. Pre-requisite: Student enrollment MUST be approved by SCP Coordinator.

Course Name	Subject	Course Description
TCH031E2: DIGITAL PHOTOGRAPHY I	Optional	Have you wondered how professional photographers manage to capture that perfect image? Gain a better understanding of photography by exploring camera functions and the elements of composition while putting theory into practice by taking your own spectacular shots! Learn how to display your work for exhibitions and develop skills important for a career as a photographer. Course Length: One semester
TCH032E2: DIGITAL PHOTOGRAPHY II	Optional	Building on the prior prerequisite course, further develop your photography skills by learning more professional tips, tricks, and techniques to elevate your images. Explore various photographic styles, themes, genres, and artistic approaches. Learn more about photojournalism and how to bring your photos to life. Using this knowledge, build a portfolio of your work to pursue a career in this field! Course Length: One semester Prerequisite: TCH031 Digital Photography 1
TCH047: WEB DESIGN	Optional	The TCH047-PBL Web Design course is a project-based that teaches students how to build their own web pages. Students will learn the languages HTML and CSS and will create their own live homepages to serve as portfolios of their creations. By the end of this course, students will be able to explain how web pages are developed and viewed on the Internet, analyze and fix errors in existing websites, and create their very own multi page websites. Students will learn the foundations of user interface design, rapid prototyping and user testing, and will work together to create professional, mobile responsive websites, as well as foundational cybersecurity topics including digital citizenship and cyber hygiene, software security, networking fundamentals, and basic system administration. Course Length: Two semesters
TCH370: WEB DEVELOPMENT	Optional	The Web Development Capstone Course is intended to teach students the fundamentals of development in a project-based learning environment. Students will be taught the basic elements of web development, such as web hosting, file organization, and incorporating JavaScript into HTML files. Over the course of the school will collaboratively and independently design, develop and implement functional and responsive webpages using these foundational skills. Course Length: Two semesters
TCH076: 3D MODELING 1	Optional	Heart valves, cars, cartoons, and buildings may not seem to have much in common, but they all share one spectacular attribute: all originated as a 3D model. 3D modeling has changed the way the world makes things, and in this course, you'll learn the basics to begin creating in 3D! You'll learn how different 3D models are built and how to practice using a variety of modeling methods. By the end of the course, you'll walk away with a portfolio of your ingenious modeling ideas. 3D modeling is an essential part of the modern world and soon, you'll be able to contribute yourself! Course Length: One semester
TCH077: 3D MODELING 2	Optional	Many buildings that are rendered in the real world first are constructed in a digital 3D world that depicts the aesthetics, environment, and conditions of what will come to be. In this course, you will be introduced to the tools and techniques needed to create works of 3D art. You will bring your objects to life with color, textures, lighting, and shadow all while simulating the movement of world around. Are you ready to bring beautiful objects to life in a 3D world? Let's get started today! Course Length: One semester Prerequisite: TCH076

**INFORMATION TECHNOLOGY: GAME DESIGN & PROGRAMMING**

<b>Course Name</b>	<b>Subject</b>	<b>Course Description</b>
TCH220-PBL: COMPUTER SCIENCE PRINCIPLES	Game Design & Programming	TCH220-PBL Computer Science Principles is a CodeHS course that introduces students to the foundational concepts of computer science and explores the impact computing and technology have on our society. The course utilizes a project-based learning approach. With a unique focus on creative problem solving and real-world applications, the CodeHS Computer Science Principles course allows students to explore several important topics of computing using their own ideas and creativity, use the power of computing to create artifacts of personal value, and develop an interest in computer science that will foster further endeavors in the field. Course Length: One semester
TCH073E2-PBL VIDEO GAME DESIGN 1&2	Game Design & Programming	The CodeHS video game design curriculum teaches the foundations of creating video games in JavaScript. The course utilizes a project-based learning approach. The content is fully web-based, with students writing and running code in the browser. Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Students write and run JavaScript programs in the browser using the CodeHS editor. Course Length: Two semesters Prerequisite: This course is designed for beginners with no previous background in computer science but does teach advanced topics. The course is highly visual, dynamic, and interactive, making it engaging for new coders.
TCH110: COMP SCI JAVASCRIPT	Game Design & Programming	TCH110 Computer Science: JavaScript I is a CodeHS course that covers the first semester of the Introduction to Computer Science in JavaScript course series. In this course, students are introduced to the foundations of computer science and the basics of programming with the JavaScript language. After completing this course, students develop the skills needed to take the second-semester course in this series. Students learn material equivalent to a semester college introductory course in computer science and can program in JavaScript upon completing both course A and course B in this series.
TCH174 Digital Media: Illustrator with Exam Prep	Game Design & Programming	<ul style="list-style-type: none"> <li>o Courseware is designed for use in middle and high schools, and students can choose to work directly within the software or in a simulated environment (meaning that you do not have to have software installed on the computer).</li> <li>o Students will use a combination of written and video tutorials, quizzes, projects, and assessments throughout the course.</li> <li>o Dynamic grading tracks student progress automatically. Each course includes a comprehensive e-Textbook that can be used to inform discussions or assigned as homework.</li> <li>o All courses are aligned with current industry-based certifications and test prep is included</li> </ul>
TCH381: ESSENTIALS OF CLOUD COMPUTING	Game Design & Programming	This course is a Project-Based Learning course (PBL) and is designed to explore cloud technology. Students will be introduced to basic cloud concepts, examine factors impacting business decisions, and address issues to reduce security risks. In addition, students will explore Amazon Web Services (AWS). Students will complete projects to develop a deeper understanding of concepts. This course will help prepare students for two certification tests: CompTIA Cloud Essentials+ and AWS Certified Cloud Practitioner.
TCH380D Computer Fundamentals	Optional	This course addresses basic IT literacy and ensures students understand the different terminology and key concepts used in the IT industry. It also serves as an entry point for students who are new to computers. Topics covered include operating systems, hardware basics, troubleshooting, software installation, security, networking, and databases. This course prepares students for the CompTIA IT Fundamentals+ Certification (FC0-U61) exam.
TCH180: INTRO TO GAME DESIGN WITH P5PLAY	Optional	This course discusses the foundations of game design and p5play. You will learn important basic skills including programming in JavaScript and 5play. You will also apply your knowledge with several projects.

Course Name	Subject	Course Description
TCH0175 Digital Media: Photoshop with Exam Prep	Optional	TCH175 Digital Media: Photoshop with Exam Prep prepares students for the Adobe Certified Professional Exam. The course covers the fundamentals of working in the design industry. It will familiarize students with the key terminology related to digital images, introduce them to the purpose, audience, and needs of preparing images, and teach them basic design principles and best practices. The course will also cover project setup and interface, document organization, creating and modifying visual elements, and publishing digital media. Students will be exposed to using layers, modifiable visibility, and nonprinting design tools; importing assets; managing colors, swatches, gradients, brushes, symbols, styles, and patterns, understanding destructive and nondestructive editing; and preparing images for export.
TCH342E2: PYTHON PROGRAMMING	Optional	TCH342 Python Programming is a CodeHS course that teaches the fundamentals of computer programming as well as some advanced features of the Python language. Students will develop an appreciation for how computers store and manipulate information by building simple console-based games. Once students complete the Introduction to Python course, they will have learned material equivalent to a semester college introductory course in Computer Science and be able to program in Python. Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Several units have free-response questions that have students consider the applications of programming and incorporate examples from their own lives. Course Length: Two semesters
TCH500E2 A & B: AP COMPUTER SCIENCE PRINCIPLES	Optional	TCH500 AP Computer Science Principles introduces students to the foundational concepts of computer science and explores the impact computing and technology have on our society. With a unique focus on creative problem solving and real-world applications, AP Computer Science Principles gives students the opportunity to explore several important topics of computing using their own ideas and creativity, use the power of computing to create artifacts of personal value, and develop an interest in computer science that will foster further endeavors in the field. Each unit of the course is broken down into lessons. Lessons consist of video tutorials, short quizzes, examples programs to explore, written programming exercises, free response exercise, collaborative creation projects, and research projects. Course Length: Two semesters Prerequisites: Algebra I, TCH220
TCH510E2 A & B: AP COMPUTER SCIENCE A	Optional	TCH510 AP Computer Science introduces students to computer science through programming. Fundamental topics in this course include the design of solutions to problems, the use of data structures to organize large sets of data, the development and implementation of algorithms to process data and discover new information, the analysis of potential solutions, and the ethical and social implication of computing systems. The course emphasizes object-oriented programming and design using the Java programming language. Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Several units have free-response questions that have students consider the applications of programming and incorporate examples from their own lives. Course Length: Two semesters Prerequisites: Algebra I

**INFORMATION TECHNOLOGY: PROGRAMMING & SOFTWARE DEVELOPMENT**

Course Name	Subject	Course Description
TCH220-PBL: COMPUTER SCIENCE PRINCIPLES	Programming & Software Devel.	TCH220-PBL Computer Science Principles is a CodeHS course that introduces students to the foundational concepts of computer science and explores the impact computing and technology have on our society. The course utilizes a project-based learning approach. With a unique focus on creative problem solving and real-world applications, the CodeHS Computer Science Principles course allows students to explore several important topics of computing using their own ideas and creativity, use the power of computing to create artifacts of personal value, and develop an interest in computer science that will foster further endeavors in the field. Course Length: One semester
TCH200: APPLE SWIFT APP DEVELOPMENT	Programming & Software Devel.	This course introduces students to Swift and prepares students to obtain the App Development with Swift Certification. Students will get an insight into key computing concepts and a strong foundation in programming apps using Swift. Over 7 modules, students will learn everything from absolute basics like planning and designing apps to more complex tasks like using the interface builder and programming using Swift language. The course contains guided tutorials, do-it-yourself projects, and great resources that will help students practice and learn how to work in Swift."
TCH342E2: PYTHON PROGRAMMING	Programming & Software Devel.	TCH342 Python Programming is a CodeHS course that teaches the fundamentals of computer programming as well as some advanced features of the Python language. Students will develop an appreciation for how computers store and manipulate information by building simple console-based games. Once students complete the Introduction to Python course, they will have learned material equivalent to a semester college introductory course in Computer Science and be able to program in Python. Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Several units have free-response questions that have students consider the applications of programming and incorporate examples from their own lives. Course Length: Two semesters
TCH323A: INTRODUCTION TO JAVA PROGRAMMING 1	Programming & Software Devel.	TCH323 Introduction to Java 1 is a CodeHS course that teaches students the basics of object-oriented programming with a focus on problem- solving and algorithm development. Students learn basic Java, methods, data structures, classes, and object-oriented programming in this course. It is the first course in a two-course sequence and should be completed before TCH324 Introduction to Java 2. Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Several units have free- response questions that have students consider the applications of programming and incorporate examples from their own lives. At the end of each unit, students take a summative multiple- choice unit quiz that assesses their knowledge of the Java concepts covered in the unit. Included in each lesson is a formative short multiple-choice quiz. Course Length: One semester Prerequisites: TCH220-PBL Computer Science Principles or other introduction to computer science, Algebra 1
TCH323B: INTRODUCTION TO JAVA PROGRAMMING 2	Programming & Software Devel.	TCH324 Introduction to Java Programming 2 is a CodeHS course that teaches students the basics of object-oriented programming with a focus on problem-solving and algorithm development. Students learn basic Java, methods, data structures, classes, and object-oriented programming in this course. It is the second course in a two-course sequence and should be completed after TCH323 Introduction to Java 1. Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Several units have free-response questions that have students consider the applications of programming and incorporate examples from their own lives. At the end of each unit, students take a summative multiple-choice unit quiz that assesses their knowledge of the Java concepts covered in the unit. Included in each lesson is a formative short multiple-choice quiz. Course Length: One semester Prerequisites: TCH323AE2 Introduction to Java 1

Course Name	Subject	Course Description
TCH520 DATA STRUCTURES IN C_++ 1	Programming & Software Devel.	<p>TCH520 Data Structures in C++ 1 focuses on different ways to store data, beyond traditional variables and lists. In this course, students will learn about advanced data structures, such as queues, while applying them in larger, real-world assignments and projects.</p> <p>The Data Structures in C++ 1 course is designed for students that have previously completed a full year computer science course, such as AP CSA. While C++ is used as the language for the course, the focus of the courses is on understanding and applying advanced data structures. Prior C++ knowledge is not a prerequisite; however, students should have a working knowledge of basic computer science concepts such as variables, control structures, and functions/methods in at least one programming language. The course utilizes a blended classroom approach. The content is fully web-based, with students writing and running code in the browser.</p> <p>Teachers utilize tools and resources provided by CodeHS to leverage time in the classroom and give focused 1-on-1 attention to students. Each unit of the course is broken down into lessons. Lessons consist of tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice and projects in total. Each unit ends with a comprehensive unit test that assesses a student's mastery of the material from that unit. Students write and run C++ programs in the browser using the CodeHS editor. Course Length: One semester</p>
TCH521 DATA STRUCTURES IN C++ 2	Programming & Software Devel.	<p>TCH521 Data Structures in C++ 2 focuses on different ways to store data, beyond traditional variables and lists. In this course, students will learn about advanced data structures such as maps, sets, etc. while applying them in larger, real-world assignments and projects.</p> <p>The Data Structures in C++ 2 course is designed for students that have previously completed Data Structures in C++ 1.</p> <p>The course utilizes a blended classroom approach. The content is fully web-based, with students writing and running code in the browser.</p> <p>Teachers utilize tools and resources provided by CodeHS to leverage time in the classroom and give focused 1-on-1 attention to students. Each unit of the course is broken down into lessons. Lessons consist of tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice and projects in total. Each unit ends with a comprehensive unit test that assesses a student's mastery of the material from that unit. Students write and run C++ programs in the browser using the CodeHS editor. Course Length: One semester</p>
TCH380D Computer Fundamentals	Optional	<p>This course addresses basic IT literacy and ensures students understand the different terminology and key concepts used in the IT industry. It also serves as an entry point for students who are new to computers. Topics covered include operating systems, hardware basics, troubleshooting, software installation, security, networking, and databases. This course prepares students for the CompTIA IT Fundamentals+ Certification (FC0-U61) exam</p>
TCH102: FOUNDATIONS OF AI	Optional	<p>This course comprehensively explores artificial intelligence, covering its foundational concepts, historical evolution, and future implications. Students explore algorithms, machine learning, deep learning, and ethical considerations in AI. Through examining real-world applications and societal impacts, students gain an understanding of the interaction between humans and AI, including its potential effects on various industries</p>
TCH500E2 A & B: AP COMPUTER SCIENCE PRINCIPLES	Optional	<p>TCH500 AP Computer Science Principles introduces students to the foundational concepts of computer science and explores the impact computing and technology have on our society. With a unique focus on creative problem solving and real-world applications, AP Computer Science Principles gives students the opportunity to explore several important topics of computing using their own ideas and creativity, use the power of computing to create artifacts of personal value, and develop an interest in computer science that will foster further endeavors in the field.</p> <p>Each unit of the course is broken down into lessons. Lessons consist of video tutorials, short quizzes, examples programs to explore, written programming exercises, free response exercise, collaborative creation projects, and research projects. Course Length: Two semesters Prerequisites: Algebra I, TCH220</p>

Course Name	Subject	Course Description
TCH510E2 A & B: AP COMPUTER SCIENCE A	Optional	TCH510 AP Computer Science introduces students to computer science through programming. Fundamental topics in this course include the design of solutions to problems, the use of data structures to organize large sets of data, the development and implementation of algorithms to process data and discover new information, the analysis of potential solutions, and the ethical and social implication of computing systems. The course emphasizes object-oriented programming and design using the Java programming language. Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Several units have free-response questions that have students consider the applications of programming and incorporate examples from their own lives. Course Length: Two semesters Prerequisites: Algebra I
<b>INFORMATION TECHNOLOGY: NETWORK SYSTEMS &amp; CYBERSECURITY</b>		
TCH055DE3-PBL Web Communications	Cybersecurity	This semester-long course for high school freshmen is an exploratory course in web communications. It explores and delves into applications encompassing digital citizenship, information literacy, creative credit and copyright, online and in-person collaboration, designing and developing accessible websites as an avenue to personal creativity, and understanding structural aspects of computing (e.g., hardware, servers, devices, file organization). The course is taught utilizing a project-based learning (PBL) approach.  Each unit of the course is broken down into lessons. Lessons consist of video tutorials, short quizzes, example web pages to explore, and web design exercises in which students develop and publish their own web sites. Each lesson includes at least one formative short multiple-choice quiz. At the end of each unit, students take a summative multiple choice unit quiz that assesses their knowledge of the concepts covered in the unit.
TCH380D Computer Fundamentals	Cybersecurity	This course addresses basic IT literacy and ensures students understand the different terminology and key concepts used in the IT industry. It also serves as an entry point for students who are new to computers. Topics covered include operating systems, hardware basics, troubleshooting, software installation, security, networking, and databases. This course prepares students for the CompTIA IT Fundamentals+ Certification (FC0-U61) exam. **This course should be taken before all other courses in Cyber Security Pathway.
TCH541E4 Network+ Guide to Networks 1	Cybersecurity	This is the first semester of a two-semester course. The course gives students the technical skills and industry know-how to begin an exciting career installing, configuring, and troubleshooting computer networks. The course helps prepare students for success on CompTIA's Network+ N10-008 certification exam with fully mapped coverage of all objectives, including protocols, topologies, hardware, network design, and troubleshooting. Prerequisite: TCH380 Computer Fundamentals
TCH542E4 Network+ Guide to Networks 2	Cybersecurity	This is the second semester of a two-semester course. The course continues to give students the technical skills and industry know-how to begin an exciting career installing, configuring, and troubleshooting computer networks. The course helps prepare students for success on CompTIA's Network+ N10-008 certification exam with fully mapped coverage of all objectives, including protocols, topologies, hardware, network design, and troubleshooting.
TCH551E3 Security+ with Exam Prep 1	Cybersecurity	This course covers the essentials of network security, including compliance and operational security; threats and vulnerabilities; application, data, and host security; access control and identity management; and cryptography, mobile device security, and virtualization. The use of case studies allows students to explore real-world security scenarios and allow students to apply what they have learned. Prerequisite: TCH380 Computer Fundamentals
TCH552E3 Security+ with Exam Prep 2	Cybersecurity	This course covers the essentials of network security, including compliance and operational security; threats and vulnerabilities; application, data, and host security; access control and identity management; and cryptography, mobile device security, and virtualization. The use of case studies allows students to explore real-world security scenarios and allow students to apply what they have learned.

Course Name	Subject	Course Description
TCH561E3 A+ Computer Management with Exam Prep 1	Cybersecurity	This is the first semester of a two-semester course. The course provides a comprehensive introduction to managing and maintaining computer hardware and software. The course closely integrates the CompTIA A+ Exam objectives to prepare students for the 220-1101 and 220-1102 certification exams. The course includes the latest trends in hardware, security, virtualization, coverage of cloud computing, Linux and Mac OS, and increased emphasis on mobile devices. Prerequisite: TCH380 Computer Fundamentals
TCH562E3 A+ Computer Management with Exam Prep 2	Cybersecurity	This is a continuation of semester one. The course closely integrates the CompTIA A+ Exam objectives to prepare students for the 220-1101 and 220-1102 certification exams. The course includes the latest trends in hardware, security, virtualization, coverage of cloud computing, Linux and Mac OS, and increased emphasis on mobile devices. Pre-Requisite: TCH561
TCH102: FOUNDATIONS OF AI	Optional	This course comprehensively explores artificial intelligence, covering its foundational concepts, historical evolution, and future implications. Students explore algorithms, machine learning, deep learning, and ethical considerations in AI. Through examining real-world applications and societal impacts, students gain an understanding of the interaction between humans and AI, including its potential effects on various industries
TCH500E2 A & B: AP COMPUTER SCIENCE PRINCIPLES	Optional	TCH500 AP Computer Science Principles introduces students to the foundational concepts of computer science and explores the impact computing and technology have on our society. With a unique focus on creative problem solving and real-world applications, AP Computer Science Principles gives students the opportunity to explore several important topics of computing using their own ideas and creativity, use the power of computing to create artifacts of personal value, and develop an interest in computer science that will foster further endeavors in the field. Each unit of the course is broken down into lessons. Lessons consist of video tutorials, short quizzes, examples programs to explore, written programming exercises, free response exercise, collaborative creation projects, and research projects. Course Length: Two semesters Prerequisites: Algebra I, TCH220, TCH380
TCH510E2 A & B: AP COMPUTER SCIENCE A	Optional	TCH510 AP Computer Science introduces students to computer science through programming. Fundamental topics in this course include the design of solutions to problems, the use of data structures to organize large sets of data, the development and implementation of algorithms to process data and discover new information, the analysis of potential solutions, and the ethical and social implication of computing systems. The course emphasizes object-oriented programming and design using the Java programming language. Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Several units have free-response questions that have students consider the applications of programming and incorporate examples from their own lives. Course Length: Two semesters Prerequisites: Algebra I, TCH380

ENGINEERING & STEM: ENGINEERING & TECHNOLOGY		
Course Name	Subject	Course Description
TCH120: ENGINEERING DESIGN & PRESENTATION	Engineering	This course will cover essential aspects of engineering design and communication. Students will explore the significance of computer-aided design and drawing in engineering, integrate ethical considerations and regulations into design scenarios, and develop professional behaviors. Students will learn effective communication of engineering findings and various methods of data collection and analysis. Students will engage in analyzing the engineering process, practice brainstorming and critical thinking, and create or improve products while maintaining detailed engineering documentation.
TCH130: FOUNDATIONS OF ENGINEERING SCIENCE	Engineering	This course outlines the foundational skills and principles necessary for success in engineering. Students explore teamwork dynamics and leadership roles, progressing to understand mathematical concepts like algebra, geometry, statistics, and probability as they relate to engineering. Students gain hands-on experience in conducting experiments, analyzing data, and designing prototypes. Additionally, students explore fluid power systems, basic construction techniques, and emerging trends in the industry.
TCH140: PRINCIPLES OF APPLIED ENGINEERING	Engineering	In this course, students will explore specialized areas of engineering and related fields by focusing on scientific inquiry, interdisciplinary integration, and project-based learning. Through research, projects, and collaboration, students will learn about manufacturing, electronic theory, thermal energy, kinematics, material processes, and other topics that provide insights into the intersection of technology, society, and innovation. In addition, course content will inform students about technical writing, construction drawings, computing advancements, and design and documentation. This course furthermore helps students prepare for college-level study and careers in STEM fields.
TCH150: ENGINEERING DESIGN	Engineering	This course outlines key principles and advanced concepts vital for success in engineering design. Beginning with professionalism in the sciences, students learn essential skills like effective communication and teamwork. Subsequent units cover diverse topics including lab safety procedures and advanced computer-aided drawing techniques. Ethical considerations in robotics are explored alongside hands-on projects such as designing a functional robotic hand. Emphasizing collaboration, critical thinking, and practical application, this course equips students with the knowledge needed for a career in engineering.
TCH380D Computer Fundamentals	Optional	This course addresses basic IT literacy and ensures students understand the different terminology and key concepts used in the IT industry. It also serves as an entry point for students who are new to computers. Topics covered include operating systems, hardware basics, troubleshooting, software installation, security, networking, and databases. This course prepares students for the CompTIA IT Fundamentals+ Certification (FC0-U61) exam. **This course should be taken before all other courses in Cyber Security Pathway.
TCH102: FOUNDATIONS OF AI	Optional	This course comprehensively explores artificial intelligence, covering its foundational concepts, historical evolution, and future implications. Students explore algorithms, machine learning, deep learning, and ethical considerations in AI. Through examining real-world applications and societal impacts, students gain an understanding of the interaction between humans and AI, including its potential effects on various industries
TCH145: DATA SCIENCE	Optional	This course discusses the essential skills of data scientists which include data collection, analyzing data, and how to build statistical algorithms and models to represent meaningful insights and results.

**HEALTH SCIENCE: THERAPEUTICS PATHWAY**

<b>Course Name</b>	<b>Subject</b>	<b>Course Description</b>
HLT110E2: PBL HEALTH SCIENCES WITH NEWSELA	Therapeutics	This course is a Project Based Learning course (PBL) and is designed as an exploration of the health sciences. In this course students explore basic concepts in health for the people, tackling sports injuries, emergency response, and cancer education, as well as career options in various clusters. Students completed project to develop a deeper understanding of the roles these career functions play. Course Length: One semester
HLT340: PROFESSIONALISM IN ALLIED HEALTH	Therapeutics	Professionalism in Allied Health is a comprehensive course with insight and focus on professional skills, providing foundational knowledge required of an allied healthcare professional. Video-based lessons include managing work expectations and patient interactions, managing emotions, work relationships and patient interactions, successful interactions and professional communications, and professional behavior for allied health careers. Course Length: One semester
HLT213: MEDICAL TERMINOLOGY 1	Therapeutics	This course simplifies the process of memorizing complex medical terminology by focusing on the important word parts—common prefixes, suffixes, and root words—that provide a foundation for learning hundreds of medical terms. Organized by body systems, the course follows a logical flow of information: an overview of the body system's structures and functions, a summary of applicable medical specialties, and ultimately pathology, diagnostic, and treatment procedures. Course Length: One semester
HLT214: MEDICAL TERMINOLOGY 2	Therapeutics	This course simplifies the process of memorizing complex medical terminology by focusing on the important word parts—common prefixes, suffixes, and root words—that provide a foundation for learning hundreds of medical terms. Organized by body systems, the course follows a logical flow of information: an overview of the body system's structures and functions, a summary of applicable medical specialties, and ultimately pathology, diagnostic, and treatment procedures. Course Length: One semester Prerequisite: HLT213 Medical Terminology 2
SCI330: ANATOMY AND PHYSIOLOGY	Therapeutics	Starting with the relationship between anatomy and physiology, students will then learn about cell structure and their processes. Learners will also discover the functions and purposes of the skeletal, muscular, nervous, and cardiovascular systems, as well diseases that affect those systems. Students will learn about the structure, function, and interrelation between the lymphatic, immune, respiratory, digestive, urinary, and the endocrine systems. The reproductive system is also discussed along with hereditary traits and genetics. Finally, students will explore the importance of accurate patient documentation as well technology used in the industry. Course Length: Two semesters
HTL420: CLINICAL MEDICAL ASSISTING	Therapeutics	Clinical Medical Assisting is a comprehensive course with insight and focus on patient care in the healthcare facility, providing foundational knowledge required of an allied healthcare professional. Video-based lessons include fundamentals of clinical medical assisting with emphasis on infection control, vital signs, the clinical laboratory, general and specialty physical examinations, urinalysis, microbiology, immunology, nutrition, cardiopulmonary diagnostic testing, pharmacology, medication administration, phlebotomy, hematology, surgical procedure assisting and emergency preparedness. Topics related to diversity, patient interaction, documentation and communication will be addressed. Throughout each lesson, the role of the clinical medical assistant will be presented and explained as applicable to patient education and legal & ethical issues. Course Length: Two semesters
HLT330: MEDICAL OFFICE PROCEDURES AND ADMIN	Optional	This course will introduce students to the Healthcare industry, its environment along with the day-to-day skill set, and knowledge required to fulfill a position as a Medical Administrative Assistant. Modules include Professional Behavior, Communication, Law and Ethics, Law and Medicine, Daily Operations, Telephone Techniques, Appointment Scheduling, Correspondence, Computers, HIPPA, Regulations, Records Management, Information Management, Basics of Coding, Health Insurance Basics, Professional Fees, Accounting and Bookkeeping, Banking and Financial Management, Practice Management, Marketing and Customer Service. Course Length: One semester

Course Name	Subject	Course Description
HLT430: PBL INTRODUCTION TO PHARMACOLOGY	Optional	This course is a Project Based Learning course (PBL). If you ever thought about pursuing a gratifying career in biomedical sciences, pharmacology is a must. Pharmacology is the fascinating study of chemistry, origins, and types of medications. Whether you plan on going into medicine, nursing, dentistry, veterinary medicine, or pharmacy, you'll need to learn the effects of medicines on different biological systems, appropriate dosages, and how the body responds to different medications. Course Length: One semester Prerequisite: SCI330A Anatomy and Physiology 1, SCI330B Anatomy and Physiology 2
HTL431: PHARMACY TECHNICIAN	Optional	The Pharmacy Technician course is designed to educate and train the student in the diverse field of Pharmacy Technology. The student will be provided with didactic coursework in the areas of prescription processing, pharmacy nomenclature, biopharmaceutics and drug activity, dosage calculations, and common mathematical formulas and conversions. Considerations of drug routes and formulations includes tablets and capsules, liquid prescriptions, parenteral and enteral, and enteral, and insulin and syringes. To better understand the business side of the pharmacy world, student will learn about HIPAA, drug regulation and control, inventory management, financial considerations, legal and ethical issues, sterile and non-sterile compounding, and units of measurement. Throughout the course, the student will perform realistic pharmacy simulations that duplicate tasks performed in the work environment. Course Length: Two semesters Prerequisite: SCI330A and SCI330B Anatomy and Physiology or SCI321 and SCI322 Anatomy and Physiology
HTL460: SPORTS MEDICINE INTRODUCTION	Optional	What do you think of when you hear the phrase "sports medicine professional"? Believe it or not, the team encompasses a much larger range of career options than jobs typically associated with this field. Explore some of the most popular career pathways, day-to-day responsibilities, emergency care for athletes, and legal obligations. Discover what nutrition, healthy lifestyle, and fitness truly mean, and dive into anatomy, human biomechanics, and exercise modalities. Learn how to get started in this exciting field. Course Length: One semester Prerequisite: SCI330A Anatomy and Physiology 1, SCI330B Anatomy and Physiology 2
HLT 461: SPORTS MEDICINE PREVENTING INJURY	Optional	This course is designed as an exploration of career pathways in sports medicine. In this course students explore basic concepts in the broad areas within the National Career Clusters® Framework, as well as career options in various clusters. Students study the concepts of body organization, muscles, movement, injury assessment, soft tissue injuries, neck pain, chest and abdomen issues, and upper and lower extremity issues. Students complete projects to develop a deeper understanding of the roles these career functions play. Course Length: One semester Prerequisite: HLT460
HLT400: FUNDAMENTALS OF MENTAL HEALTH CARE	Optional	Those working in the field of social services are dedicated to strengthening the economic and social well-being of others and helping them lead safe and independent lives. Explore the process of helping, body, mind, and family wellness, and how you can become a caring social service professional. If you are interested in an emotionally fulfilling and rewarding career and making a difference in the lives of others, social and human services may be the right field for you.
HLT230: INTRO TO HUMAN AND SOCIAL SERVICES	Optional	Those working in the field of social services are dedicated to strengthening the economic and social well-being of others and helping them lead safe and independent lives. Explore the process of helping, body, mind, and family wellness, and how you can become a caring social service professional. If you are interested in an emotionally fulfilling and rewarding career and making a difference in the lives of others, social and human services may be the right field for you.
HLT442: MEDICAL SCRIBE	Optional	Medical Scribe is a comprehensive course with insight and focus on professional skills, providing foundational knowledge required of a medical scribe professional. Video-based lessons include the role of the medical scribe, medical law and ethics, clinic workflow and documentation, introduction to PM/EHR administrative, working with the physician, and release of information.

**HEALTH SCIENCE: DIAGNOSTICS PATHWAY**

<b>Course Name</b>	<b>Subject</b>	<b>Course Description</b>
HLT110E2: PBL HEALTH SCIENCES WITH NEWSOLA	Diagnosics	This course is a Project Based Learning course (PBL) and is designed as an exploration of the health sciences. In this course students explore basic concepts in health for the people, tackling sports injuries, emergency response, and cancer education, as well as career options in various clusters. Students completed project to develop a deeper understanding of the roles these career functions play. Course Length: One semester
HLT340: PROFESSIONALISM IN ALLIED HEALTH	Diagnosics	Professionalism in Allied Health is a comprehensive course with insight and focus on professional skills, providing foundational knowledge required of an allied healthcare professional. Video-based lessons include managing work expectations and patient interactions, managing emotions, work relationships and patient interactions, successful interactions and professional communications, and professional behavior for allied health careers. Course Length: One semester
HLT213: MEDICAL TERMINOLOGY 1	Diagnosics	This course simplifies the process of memorizing complex medical terminology by focusing on the important word parts—common prefixes, suffixes, and root words—that provide a foundation for learning hundreds of medical terms. Organized by body systems, the course follows a logical flow of information: an overview of the body system's structures and functions, a summary of applicable medical specialties, and ultimately pathology, diagnostic, and treatment procedures. Course Length: One semester
HLT214: MEDICAL TERMINOLOGY 2	Diagnosics	This course simplifies the process of memorizing complex medical terminology by focusing on the important word parts—common prefixes, suffixes, and root words—that provide a foundation for learning hundreds of medical terms. Organized by body systems, the course follows a logical flow of information: an overview of the body system's structures and functions, a summary of applicable medical specialties, and ultimately pathology, diagnostic, and treatment procedures. Course Length: One semester Prerequisite: HLT213 Medical Terminology 2
SCI330: ANATOMY AND PHYSIOLOGY	Diagnosics	Starting with the relationship between anatomy and physiology, students will then learn about cell structure and their processes. Learners will also discover the functions and purposes of the skeletal, muscular, nervous, and cardiovascular systems, as well diseases that affect those systems. Students will learn about the structure, function, and interrelation between the lymphatic, immune, respiratory, digestive, urinary, and the endocrine systems. The reproductive system is also discussed along with hereditary traits and genetics. Finally, students will explore the importance of accurate patient documentation as well technology used in the industry. Course Length: Two semesters
HLT310: INTRO TO MEDICAL DIAGNOSTICS TECHNOLOGY	Optional	This course is a Project Based Learning course (PBL). Have you ever wondered how a health professional knows how to diagnose an illness? Or what medications to prescribe to a patient depending on the person's body and their signs and symptoms? Learn about different diagnostic technology used and essential body systems and fluids that need to be understood to make an accurate diagnosis of a disease, condition, or illness. This career field is flourishing, and now is the time to be part of it!
HLT320: MEDICAL TECH: SYSTEMS & PROCEDURES	Optional	PBL Our bodies are complex, and when we start feeling ill, a doctor or specialist must analyze and diagnose what could be wrong. Learn about different diagnostic technology, procedures, essential body systems, and fluids that need to be understood to make an accurate diagnosis of a disease, condition, or illness. This career field is flourishing, and now is the time to be part of it!

Course Name	Subject	Course Description
HLT472: MEDICAL LAB ASSISTING	Optional	Medical Lab Assisting is a comprehensive course with insight and focus on laboratory skills, providing foundational knowledge required of a medical lab professional. Video-based lessons include introduction to clinical laboratory science; standards, practices, law, and ethics in healthcare; quality assessment and quality control; general laboratory equipment; point-of-care testing (POCT); clinical chemistry - fundamental techniques; clinical chemical testing; automation in clinical chemistry; clinical hematology; hemostasis and blood coagulation; urinalysis and composition of urine; immunology, serology, and immunohematology; and health information technology in the laboratory.
HLT442: MEDICAL SCRIBE	Optional	Medical Scribe is a comprehensive course with insight and focus on professional skills, providing foundational knowledge required of a medical scribe professional. Video-based lessons include the role of the medical scribe, medical law and ethics, clinic workflow and documentation, introduction to PM/EHR administrative, working with the physician, and release of information.
HLT400: FUNDAMENTALS OF MENTAL HEALTH CARE	Optional	Coming Soon
<b>LAW: LEGAL SERVICES</b>		
LAW110: CAREERS IN CRIMINAL JUSTICE 1	Legal Services	Have you ever wondered what steps take place as people move through the court system? The criminal justice system is a very complex field that requires dedicated people willing to pursue equal justice for all. Explore different career choices and how the juvenile justice system, the correctional system, and the trial process all work together to maintain social order. Course Length: One semester
LAW111: CAREERS IN CRIMINAL JUSTICE 2	Legal Services	Have you ever thought about a career as a police officer, an FBI or DEA agent, or any occupation that seeks to pursue justice for all? Careers in criminal justice can be found at local, county, state, and federal levels, and even in the private sector. Explore some of the various occupations in this field, while simultaneously learning how they interact with each other and other first responders. Discover various interviewing techniques to uncover the truth. Understand the importance of making ethical decisions, and how you need to keep your sense of right and wrong in check to be successful in this field. Course Length: One semester Prerequisite: LAW110
OTH091: LAW AND ORDER	Legal Services	Every society has laws that its citizens must follow. From traffic laws to regulations on how the government operates, laws help provide society with order and structure. Our lives are guided and regulated by our society's legal expectations. Consumer laws help protect us from faulty goods; criminal laws help protect society from individuals who harm others, and family law handles the arrangements and issues that arise in areas like divorce and child custody. This course focuses on the creation and application of laws in various areas of society. By understanding the workings of our court system, as well as how laws are carried out, students become more informed and responsible citizens. Course Length: One semester
BUS410-PBL: INTRO TO BUSINESS COMMUNICATION	Legal Services	This course is a Project-Based Learning course (PBL). No matter what career you're planning to pursue, excellent professional communication will be key to your success. Upgrade your abilities in speaking, listening, writing, using and reading body language, and communicating in teams and groups. Discover how to plan, create, and deliver business presentations and communicate through graphics. In no time, you'll be communicating with confidence, stand out from your peers, and impress your employer. Course Length: One semester

Course Name	Subject	Course Description
BUS420: BUSINESS COMMUNICATION 2	Legal Services	You've learned your audience, found your voice, and can read the body's unspoken words. Now, it's time to limber up those fingers and learn the P's and Q's of communicating in a business setting. In this course, you're going to take the basic writing skills you've developed and revise them so you can take new approaches to planning, building, and distributing documents for a business audience. You'll continue to explore the essentials of writing while drafting new understandings of business documents, and then you'll learn to apply your business communication skills to job applications, interviews, and presentations. No matter your career of choice, learning to effectively communicate will help your professionalism grow leaps and bounds. Let's get writing! Course Length: One semester Prerequisite: BUS410
HLT230: INTRO TO HUMAN AND SOCIAL SERVICES	Legal Services	Those working in the field of social services are dedicated to strengthening the economic and social well-being of others and helping them lead safe and independent lives. Explore the process of helping, body, mind, and family wellness, and how you can become a caring social service professional. If you are interested in an emotionally fulfilling and rewarding career and making a difference in the lives of others, social and human services may be the right field for you.
COM110: INTERPERSONAL COMM	Optional	This course is a Project Based Learning course (PBL) and is designed as an exploration of interpersonal communication. Students study the concepts of communication, intercultural communication, building a personal brand, how to communicate effectively, and more. Students complete projects to develop a deeper understanding of the roles these career functions play.
HST060: SOCIOLOGY	Optional	Human beings are complex creatures, and when we interact and begin to form relationships and societies, things become even more complicated. Are we more likely to act differently in a group than we will when we're alone? How do we learn how to be "human"? Examine answers to these questions and many more as you explore culture, group behavior, and societal institutions and how they affect human behavior.
SCI030: FORENSIC SCIENCE	Optional	This course surveys key topics in forensic science, including the application of the scientific process to forensic analysis, procedures and principles of crime scene investigation, physical and traces evidence, and the law and courtroom procedures from the perspective of the forensic scientist. Through online lessons, virtual and hands-on labs, and analysis of fictional crime scenarios, students learn about forensic tools, technical resources, forming and testing hypotheses, proper data collection, and responsible conclusions. Course Length: One semester Prerequisites: Successful completion of at least two years of high school science, including Biology (or equivalent) and Chemistry is highly recommended
TCH055: WEB COMMUNICATIONS	Optional	This semester-long course for high school freshmen is an exploratory course in web communications. It explores and delves into applications encompassing digital citizenship, information literacy, creative credit and copyright, online and in-person collaboration, designing and developing accessible websites as an avenue to personal creativity, and understanding structural aspects of computing (e.g., hardware, servers, devices, file organization). The course is taught utilizing a project-based learning (PBL) approach.  Each unit of the course is broken down into lessons. Lessons consist of video tutorials, short quizzes, example web pages to explore, and web design exercises in which students develop and publish their own web sites. Each lesson includes at least one formative short multiple-choice quiz. At the end of each unit, students take a summative multiple choice unit quiz that assesses their knowledge of the concepts covered in the unit.

Course Name	Subject	Course Description
HLT400: FUNDAMENTALS OF MENTAL HEALTH CARE	Optional	Coming Soon
OTH039: CRIMINOLOGY	Optional	Why do certain people commit horrible acts? Can we ever begin to understand their reasoning and motivation? Perhaps. The mental state of a criminal can be affected by many different aspects of life: psychological, biological, sociological, all of which have different perspectives and influences. Investigate not only how these variables affect the criminal mind but also how crimes are investigated and handled in the criminal justice system.
ENG020: PUBLIC SPEAKING	Optional	Students are introduced to public speaking as an important component of their academic, work, and social lives. They study public speaking occasions and develop skills as fair and critical listeners, or consumers, of spoken information and persuasion. Students study types of speeches (informative, persuasive, dramatic, and special occasion), read and listen to models of speeches, and prepare and present their own speeches to diverse audiences. Students learn to choose speaking topics and adapt them to specific audiences, to research and support their ideas, and to benefit from listener feedback. They study how to incorporate well-designed visual and multimedia aids in presentations and how to maintain a credible presence in the digital world. Students also learn about the ethics of public speaking and about techniques for managing communication anxiety. Course Length: One semester
<b>HS EXPLORATORY: PROFESSIONALISM &amp; LEADERSHIP</b>		
ENG020: SUMMIT PUBLIC SPEAKING	Professionalism & Leadership	Students are introduced to public speaking as an important component of their academic, work, and social lives. They study public speaking occasions and develop skills as fair and critical listeners, or consumers, of spoken information and persuasion. Students study types of speeches (informative, persuasive, dramatic, and special occasion), read and listen to models of speeches, and prepare and present their own speeches to diverse audiences. Students learn to choose speaking topics and adapt them to specific audiences, to research and support their ideas, and to benefit from listener feedback. They study how to incorporate well-designed visual and multimedia aids in presentations and how to maintain a credible presence in the digital world. Students also learn about the ethics of public speaking and about techniques for managing communication anxiety. Course Length: One semester
OTH040: REACHING YOUR ACADEMIC POTENTIAL	Professionalism & Leadership	Students learn essential academics skills within the context of their learning style, individual learning environment, and long-term goals. This course helps students develop habits for more successful reading, writing, studying, communication, collaboration, time management, and concentration. It also provides insights into how the brain works when they are learning and ways to maximize their potential. Course Length: One semester
OTH050: ACHIEVING YOUR CAREER AND COLLEGE GOALS	Professionalism & Leadership	Students explore their options for life after high school and implement plans to achieve their goals. They identify their aptitudes, skills, and preferences and explore a wide range of potential careers. They investigate the training and education required for the career of their choice and create a plan to be sure that their work in high school is preparing them for the next step. They also receive practical experience in essential skills such as searching and applying for college, securing financial aid, writing a resume and cover letter and interviewing for a job. This course is geared toward 11th and 12th graders. Course Length: One semester

Course Name	Subject	Course Description
HST350: FINANCIAL LITERACY	Professionalism & Leadership	In this course, students will explore their choices as producers, consumers, investors, and taxpayers. Students apply what they learn to real-world simulation problems. In addition, they will learn financial literacy skills emphasizing investments, markets, and taxation. Students will apply what they learn to real-world simulation problems. Topics of study include markets from historical and contemporary perspectives; supply and demand; budgeting; understanding creditworthiness and credit reports; saving options; debt reduction; theories of early economic philosophers such as Adam Smith and David Ricardo; theories of value; money (what it is, how it evolved, and the role of banks, investment houses, and the Federal Reserve); Keynesian economics; how capitalism functions, focusing on productivity, wages, investment, and growth; issues of capitalism, such as unemployment, inflation, and the national debt; profiles of individuals who are making their mark in business and economics; and a survey of markets in such areas as China, Europe, and the Middle East. Course Length: One semester
BUS410-PBL: INTRO TO BUSINESS COMMUNICATION	Professionalism & Leadership	This course is a Project-Based Learning course (PBL). No matter what career you're planning to pursue, excellent professional communication will be key to your success. Upgrade your abilities in speaking, listening, writing, using and reading body language, and communicating in teams and groups. Discover how to plan, create, and deliver business presentations and communicate through graphics. In no time, you'll be communicating with confidence, stand out from your peers, and impress your employer. Course Length: One semester
BUS420: BUSINESS COMMUNICATION 2	Professionalism & Leadership	You've learned your audience, found your voice, and can read the body's unspoken words. Now, it's time to limber up those fingers and learn the P's and Q's of communicating in a business setting. In this course, you're going to take the basic writing skills you've developed and revise them so you can take new approaches to planning, building, and distributing documents for a business audience. You'll continue to explore the essentials of writing while drafting new understandings of business documents, and then you'll learn to apply your business communication skills to job applications, interviews, and presentations. No matter your career of choice, learning to effectively communicate will help your professionalism grow leaps and bounds. Let's get writing! Course Length: One semester Prerequisite: BUS410
TCH105: COMPUTER LITERACY	Professionalism & Leadership	In this introductory course, students become familiar with the basic principles of a personal computer, including the internal hardware, operating system, and software applications. Students gain practice in using key applications such as word processing, spreadsheet, and presentation software, as well as understand social and ethical issues around the Internet, information, and security. Course Length: One semester
TCH171 Software Apps: PowerPoint with Cert Prep	Professionalism & Leadership	TCH171 Software Apps: PowerPoint with Exam Prep prepares students for the Microsoft Office Specialist Exam. This course introduces users to PowerPoint 2019 and covers: managing presentations, slides, text, shapes, and images, tables, charts, and SmartArt, 3D models and media, and transitions and animations. Students will learn basic terminology, modify slide masters and layouts, add/remove properties, set up slide shows and print options, use zoom techniques, add headers and footers, apply formatting and styles, insert hyperlinks and sections, resize and crop images, create shapes, insert audio/video clips, and set transition/animation effects and motion paths.
TCH172 Software Apps: Word with Cert Prep	Professionalism & Leadership	TCH172 Software Apps: Word with Exam Prep prepares students for the Microsoft Office Specialist Exam. This course teaches learners how to use the Word Application Interface and familiarize themselves with Word options. It covers topics such as navigating and customizing the ribbon, editing documents, formatting text, managing comments, and tracking changes to create professional documents.

Course Name	Subject	Course Description
TCH177: Software Apps Excel with Exam Prep	Professionalism & Leadership	TCH177 Software Apps: Excel with Exam Prep prepares students for the Microsoft Office Specialist Exam. This course introduces students to the Excel application interface and covers topics related to managing worksheets and workbooks, data cells and ranges, tables and table data, formulas and functions, and charts. Students will learn how to import external data, create, and edit named ranges, apply number formats, create charts, and format text using functions. They will also learn to add and modify chart elements and apply chart styles. Upon completion of this course, students will be able to navigate the Excel application interface, create formulas, manipulate data, and create charts.
WBL531: WORK EXPERIENCE 1	Professionalism & Leadership	This course seeks to help students blend classroom learning with work practice. This course is designed for students who currently have a job that has been identified as eligible for course credit. Pre-requisite: SCP Coordinator MUST approve student enrollment.

Some courses may require families to purchase materials beyond those supplied by K12 Private Academy to successfully complete the course. For more information, contact your school.
